Double Digit Addition Without Regrouping (Over 290 Practice Problems) S. L. C. Math,2016-12-12 Double-Digit Addition Without Regrouping is not intended as an introduction to adding and does not include examples for beginning counters. It is intended for use as an extended addition practice tool for 1st, 2nd, and 3rd grade math students who've already been introduced to beginning addition concepts. In beginning the study of Arithmetic, the first step for students to learn is to count readily. The second step is to combine numbers. To master the different addition combinations to 20, students should be taught to write and memorize addition facts. Also when learning addition, students should avoid counting on their fingers, a habit difficult to overcome once acquired. The Double-Digit Addition Without Regrouping Workbook does not combine addition and subtraction activities. Focusing solely on addition facts gives students the advantage of strengthening addition skills before moving on to subtraction, multiplication, and division. Various addition activities have been included in this workbook in order to alleviate boredom with the addition lessons and keep students engaged as they learn. When using this workbook to teach addition, it's important to first ensure that students are comfortable with beginning addition facts. This book includes over 290 addition practice problems without regrouping: 2-Digit Addition Number Sentences; Adding 2-Digit Numbers Vertical & Horizontal; 2-Digit Addition Word Problems; 2-Digit Addition Riddle; Comparing Sums Using 2-Digit Addition; 2-Digit Addition Long Math, Vertical & Horizontal Addition; 2-Digit Long Math Addition Word Problems; The Double-Digit Math Workbook Without Regrouping is perfect for teaching addition as a precursor to students learning addition with regrouping, subtraction, multiplication, and division. The long math section introduces concepts the student will see in multiplication and division workbooks in 3rd, 4th, and 5th grade.

Regrouping in Addition Workbook Maria Miller, 2016-01-01 Regrouping in Addition Workbook is ideal for second grade. It deals with addition within 0-100, both mentally and in columns, especially concentrating on regrouping in addition (carrying). Mental math Mental math is important because it builds number sense. We study adding mentally a two-digit number and a single-digit number where the answer goes to the next ten (problems such as $36 + 8$ or $45 + 9$). These additions use the helping problem composed of the single-digit numbers ($6 + 8$ or $5 + 9$). The child knows that $6 + 8$ fills the first ten and is four more than the ten. He/she will learn to use that fact when adding $36 + 8$. The sum $36 + 8$ fills the next whole ten (40), and is four more than that, or 44. Regrouping in tens We also study adding two-digit numbers in columns, and regrouping with tens, or carrying, which is illustrated and explained in detail with the help of visual models. These visual models take the

place of base-ten blocks or other manipulatives. You are welcome to use actual manipulatives if you prefer. The main concept to understand is that 10 ones make a new ten, and this new ten is regrouped with the other tens, written using a little 1 in the tens column. In order to prepare for adding three or four two-digit numbers in columns, we practice explicitly how to add 3 or 4 single-digit numbers, such as $7 + 8 + 6 + 4$, and the principle of adding in parts (such as $13 + 16$ is the same as $10 + 10$ and $3 + 6$). The lessons also include lots of word problems, review of even and odd numbers, and occasional review problems about doubling. Later on, in the lesson Adding 3-Digit Numbers in Columns, the student adds three-digit numbers, regrouping in tens, but there is no regrouping in hundreds. Students already know how to regroup two-digit numbers, so this lesson only extends that knowledge to numbers that have three digits. In the next lesson, students regroup ten tens as a hundred (or carry to the hundreds). This is first illustrated with visual models. You can do the exercises that include visual models with manipulatives instead (base ten blocks), if you prefer. Then we study regrouping twice: 10 ones form a new ten, and then 10 tens form a new hundred. Again, students work first with visual models, with the aim of helping them to understand the concept itself. Then, they do the process with numbers only, adding in columns.
