Planning and Optimization of LTE Network Surinder Singh, Kumar Iqbal Sahi, 2017

Radio Network Planning Guidelines for 4G Technologies Nafiz Imtiaz Bin Hamid, 2013 Radio Network Planning is the process of assigning frequencies, transmitter locations and parameters of a wireless communications system to provide sufficient coverage and capacity. It remains an essential process for network operators. 4G also known as Beyond 3G- refers

to the fourth generation of wireless communications. Network operators are deploying 4G wireless networks to effectively deliver next-generation broadband services to an expanding base of consumers eager to experience media-rich applications. Still operators are quite aware of the fact that effective 4G radio planning indeed is a challenging issue. Again, from academic perspective, the detail of this radio planning process isn't easily available for a thorough understanding. As a result, it almost has become a common view to leave this domain to industry alone. While 4G LTE promises to increase network capacity, improve QoS and significantly enhance data rates; brings new design challenges. This book aims to cover the 4G radio network planning process through LTE. A blended approach- combining background theory and practical through Dhaka city LTE radio planning using necessary simulators has been followed here.
