

Treaty Cruisers The First International Warship B

Leo Marriott

Treaty Cruisers Leo Marriott,2005-01-01 The Washington Naval Treaty of 1921 and subsequent treaties in the 1930's effectively established the size and composition of the various navies in World War II This book traces the political processes which led to the treaties, describe the heavy cruisers designed and built to the same rules by each nation and then considers how the various classes fared in World War II and assesses which were the most successful.--Dust jacket.

British Heavy Cruisers 1939-45 Angus Konstam,2012-05-22 The idea of a heavy cruiser emerged in the aftermath of the First World War, and was closely linked to the limits set by the inter-war Washington Treaty on naval armament. The pre-Great War concept of armoured cruisers had been abandoned, but in their stead the Admiralty saw a place for powerful cruisers, able to patrol the sea lanes of the British Empire, and which were well-enough armed that they could destroy enemy commerce cruisers of the kind used by the Germans in the last war. The result was a group of British warships which were collectively known as the Washington Treaty Cruisers, which did everything the Admiralty wanted, but which fitted within the limits imposed by the Washington Treaty - an armament of 8-inch guns, and a displacement of less than 10,000 tons. These impressive cruisers were high-sided, spacious and stately - perfect peacetime ambassadors for British power. In war they also packed a considerable punch. While they all carried powerful 8-inch guns, they were also given an effective armoured belt, making them proof against any foreign cruisers then in service. During the Second World War the Royal Navy's thirteen heavy cruisers saw service in every theatre of war, whether taking part in major sea battles in the Mediterranean, delivering the coup de grace to the Bismarck in the North Atlantic, or enduring the unwanted attention of kamikaze pilots in the Pacific.

The Treaty Navy James W. Hammond,2001 No serious student of the war in the Pacific can ever understand it without knowing what went on in the Naval Service in the 1920s and 1930s. The Treaty Navy tells all.

Construction of Certain Naval Vessels at the Limits Prescribed by the Treaties Signed at Washington and London United States. Congress. Senate. Committee on Naval Affairs,1934

Warships after Washington John Jordan,2011-11-21 The Washington Treaty of 1922, designed to head off a potentially dangerous arms race between the major naval powers, agreed to legally binding limits on the numbers and sizes of the principal warship types. In doing so, it introduced a new constraint into naval architecture and sponsored many ingenious attempts to maximise the power of ships built within those restrictions. It effectively banned the construction of new battleships for a decade, but threw greater emphasis on large cruisers. This much is broadly understood by anyone with an interest in warships, but both the wider context of the treaty and the detail ramifications of its provisions are little understood. The approach of this book is novel in combining coverage of the political and strategic background of the treaty and the subsequent London Treaty of 1930 with analysis of exactly how the navies of Britain, the USA, Japan, France and Italy responded, in terms of the types of warships they built and the precise characteristics of those designs. This was not just a matter of capital ships and cruisers, but also influenced the development of super-destroyers and large submarines. Now for the first time warship enthusiasts and historians can understand fully the rationale behind much of inter-war naval procurement. The Washington Treaty was a watershed, and this book provides an important insight into its full significance.

The Treaty Cruiser: A Struggle for Naval Ascendancy in Peacetime Morris J. Herbert,ARMY WAR COLL CARLISLE BARRACKS PA.,1972 The birth of the Treaty cruiser at the Washington Naval Conference is explained, and the reaction to the qualitative limitations of the treaty by the five major naval powers is examined. A literature search was used to study the development of the Treaty cruiser from 1922 until World War II. The effect of the Geneva and London Naval Conferences on the Naval race in Treaty cruisers is investigated, and violations of the treaties by the contracting powers are discussed. (Modified author abstract).

Imperial Japanese Navy Heavy Cruisers 1941-45 Mark Stille,2011-02-15 Designed with little more than a passing nod to the international naval treaties of the inter-war period, the Imperial Japanese Navy's heavy cruisers were fast and heavily armed. Like the other vessels of the Japanese Navy, the heavy cruisers were technologically superior to and far more innovative than their Allied rivals, whom they met in many of the major Pacific Theater battles, including Midway and Leyte Gulf. Mark Stille continues his study of the IJN of WWII with this fascinating topic, addressing the design and development of all 18 ships in the six heavy cruiser classes, from pre-war construction and mid-war alterations, their operational histories

and eventual fates.

Commonwealth Cruisers 1939-45 Angus Konstam,2015-10-20 In the early 20th century Britain's largest colonies established their own small naval presence, and their ships fought alongside the Royal Navy during World War I. These fleets were expanded during the inter-war years, and in 1939 the Royal Australian Navy, the Royal Canadian Navy and the Royal New Zealand Navy willingly joined the fight on behalf of the British Commonwealth. For the most part these small navies consisted of a few cruisers and destroyers, designed to protect territorial waters and local sea lanes. However, these warships and their crews soon found themselves involved in a global war, and consequently were called upon to fight wherever they were needed, against the Germans, the Italians and the Japanese. This book tells the story of these small cruiser forces, and the men who served the Allied cause so well during the long and brutal war at sea.

British Battleships of World War Two Alan Raven,John Roberts,1976 This lavishly-illustrated volume, first published in 1976 and back by popular demand, presents the full story of the design and construction of every British battleship and battlecruiser class that served in World War II--from the Queen Elizabeth class to the Vanguard. Noted authors Alan Raven and John Roberts include a comprehensive review of each ship's initial configuration and refits as well as developments in weapons, gunnery, fire control, radar, protection, and propulsion. There are also sections devoted to combat actions involving British battleships and comparisons with battleships of other navies. Six hundred photographs and illustrations, including sixteen fold-out pages, complement the authoritative history of the vessels. For other books in the battleship series, see page 26.

Cruisers of the US Navy 1922-1962 Stefan Terzibaschitsch,1988

King George V-Class Battleships Daniel Knowles,2022-04-08 Following the First World War the major naval powers entered into an agreement restricting the construction of capital ships and limiting the numbers that signatories were allowed to maintain, so numerous ships were scrapped or disposed of and the majority of planned vessels were either cancelled whilst being built or never laid down. By the late 1920s the Royal Navy's battle force comprised of the two Nelson-class ships, the battlecruisers 'Hood', 'Renown' and 'Repulse', and 'Revenge' and Queen Elizabeth-class ships, all designed before the First World War. In 1928 the Royal Navy began planning a new class of battleships which was put on hold with the signing of the Treaty of London. In 1935, realising its battle fleet was becoming dated as other nations laid down new classes of battleships, the Royal Navy recommenced planning capital ships within treaty limitations. The result was the King George V-class battleships. Regarded by some as the worst new-generation battleships in the Second World War the King George V-class were Britain's most modern battleships during the conflict and saw action in some of the most famous engagements from the sinking of the 'Bismarck' in 1941 to the surrender of Japan in 1945. This book charts the story of the King George V-class from its conception and design through to the operational history of the ships in the class.

Cruisers of World War Two M. J. Whitley,1995 Illustrated with hundreds of archive photographs and line drawings, *Cruisers of World War Two* is the large-format, comprehensive reference on the subject. Within one volume, it describes all the cruisers extant, completed or laid down during the period 1939-1945 by the nations of the world. Each class is featured with full coverage of its design, construction and subsequent modifications, together with tabulated details of builder, dates, specification data and notes on the fate of each ship. In format with the author's earlier work *Destroyers of World War Two*, this book is a major contribution to naval literature, which will enable historians, modellers and veterans to study the subject with an extra thoroughness and accuracy.
