Facing the Unexpected Ronald W. Perry,Michael K. Lindell,Kathleen J. Tierney.2001-11-06 Facing the Unexpected presents the wealth of information derived from disasters around the world over the past 25 years. The authors explore how these findings can improve disaster programs, identify remaining research needs, and discuss disaster within the broader context of sustainable development. How do different people think about disaster? Are we more likely to panic or to respond with altruism? Why are 110 people killed in a Valujet crash considered disaster victims while the 50,000 killed annually in traffic accidents in the U.S. are not? At the crossroads of social, cultural, and economic factors, this book examines these and other compelling questions. The authors review the influences that shape the U.S. governmental system for disaster planning and response, the effectiveness of local emergency agencies, and the level of professionalism in the field. They also compare technological versus natural disaster and examine the impact of technology on disaster programs.

Gender and the Politics of Disaster Recovery Sajal Roy.2022-07-22 Drawing a transdisciplinary perspective, this book investigates the ways in which gender intersect with rebuilding and post-disaster recovery process. It shows how climate-induced disasters as well as the recent COVID-19 pandemic have impacted human lives and livelihoods across various global socioeconomic conditions, sociopolitical conditions, and the gendered relationships from the Global South perspective. From the real experiences of the people vulnerable to disasters, this book identifies the strengths and weaknesses of the post-disaster management in different contexts. The varied roles and responsibilities of men and women in different countries are also examined. It is often hard to understand how local and global politics are involved in humanitarian aid. This book also shows how lower-income and under-privileged communities are deprived of their right to access relief and rehabilitation due to political involvement. This text also highlights effective methods of policy implementation for achieving sustainable recovery from these humanitarian crises. It will assist strategy planners and policymakers to focus on gender-based barriers and political hindrances as well as geological and socioeconomic factors in planning inclusive post-disaster activities. The

book will be of interest to researchers, postgraduate students and scholars in the fields of Sociology, Social Anthropology, Development Studies, Gender and Cultural Studies, Area Studies, Human Geography, Disaster Management, Forestry and Environmental Science.

Koenig and Schultz's Disaster Medicine Kristi L. Koenig, Carl H. Schultz. 2009-09-30 As societies become more complex and interconnected, the global risk for catastrophic disasters is increasing. Demand for expertise to mitigate the human suffering and damage these events cause is also high. A new field of disaster medicine is emerging, offering innovative approaches to optimize disaster management. Much of the information needed to create the foundation for this growing specialty is not objectively described or is scattered among multiple different sources. Now, for the first time, a coherent and comprehensive collection of scientific observations and evidence-based recommendations with expert contributors from around the globe is available in Koenig and Schultz's *Disaster Medicine: Comprehensive Principles and Practices*. This definitive work on disaster medicine identifies essential subject matter, clarifies nomenclature, and outlines necessary areas of proficiency for healthcare professionals handling mass casualty crises. It also describes in-depth strategies for the rapid diagnosis and treatment of victims suffering from blast injuries or exposure to chemical, biological, and radiological agents.

Climate Change Perception and Changing Agents in Africa & South Asia Vincent Itai Tanyanyiwa. 2019-02-04 'Climate Change Perception and Changing Agents in Africa & South Asia' presents first-hand experiences of climate change perception. Now more than ever understanding public perceptions of climate change is fundamental in creating effective climate policies, especially within countries that are particularly vulnerable to climate change. Striving to present a comprehensive study of climate perception in Africa and South Asia, this volume presents seven in-depth case studies from Cameroon, the Eastern Himalayas, Kenya, Nepal, and Zimbabwe. In order to combat climate change, effective communication is essential in order to educate, persuade, warn and mobilize the masses. Therefore, climate change communication is shaped not only by our different experiences and beliefs but also by the underlying cultural and political values of a country. Within this volume, climate change communication is examined from Cameroonian, Kenyan and Zimbabwean perspectives. From the role of stakeholders to practical field experiences, the individual case studies present an interesting and informative portrait of climate change communication. It is often the poorest and most vulnerable people who are most affected by the impacts of climate change. Therefore, community-based adaptation is an approach that is aimed at empowering communities in the process of planning for and coping with climate change. In this book, this progressive and

innovative approach is examined from a grass-roots perspective that looks to both the Eastern Himalayas and Zimbabwe. Readers are presented with case-studies that investigate the importance of indigenous knowledge, community-based research and the role of social workers in climate change mitigation. This high-quality resource puts forward a well-informed and accessible discussion of climate change perception that will be of interest to both students and scholars, alike.

Post-Tsunami Reconstruction in Indonesia Marjaana Jauhola.2013-06-26 This book offers a critical analysis of gender mainstreaming initiatives in the post-tsunami context in Indonesia. Aiming to challenge the terms of the debate in gender mainstreaming and disaster reconstruction efforts, Jauhola offers an important contribution for the discussion of what 'feminisms and disasters' could be. The work provides an in-depth analysis of three governmental practices of gender mainstreaming: the use of the concept pair sex/gender; the use of gender analysis and the use of project management tools and local subversion that challenges the potential normative violence of gender mainstreaming. Providing feminist intersectional reading of gender mainstreaming the book aims to illustrate that this framework does not lack political alternatives, but rather, it offers an alternative focus for feminism and for the re-conceptualisation of 'political', and provides tools for practitioners of aid aiming to come to grips with the complexity of gender equality policy agenda and its potential violent social consequences in global politics. Drawing on extensive field research in Aceh, this text is one of the first book length studies, and thus provides a significant addition to Indonesian literatures on intersectional analysis of gender, religion, heteronormativity, and feminist subversive practice. It is a vital resource for those interested in understanding global interconnections of localised disaster and conflict reconstruction.

Cities at Risk Pierre Filion,Gary Sands.2016-03-03 As levels of urbanization increase around the world, the growing concentrations of population and economic activity increases vulnerability to natural disasters. Interdependencies among urban populations mean that damage to the built environment, including water, sewer and energy infrastructure, can affect millions. Even if there is no change in the rate of occurrence of natural disasters (an unlikely prospect in the face of ongoing climate change) the potential for human and economic loss will continue to increase, along with the time required to recover. How do cities prepare for and recover from natural disasters? In this book, the authors provide a broad overview of the issues related to the impacts of disasters on cities around the world, from assessing risks to accounting for damages. The comparative approach across different types of disasters in a range of urban locations is useful in identifying opportunities for policy transfer. While there is no 'one size fits all' solution to hazard mitigation, valuable lessons can be learned from the experiences of others. The chapters emphasize different modes for assessing hazard risk, as well as strategies for increasing the resiliency of vulnerable populations.

Space Technology and GIS for Disaster Monitoring and Mitigation T.S. Chouhan.2018-12-01 Space technologies can play important roles in the reduction of disasters. The use of such technologies can be particularly useful in the risk assessment, mitigation and preparedness phases of disaster management. Space technologies are also vital to the early warning and management of the effects of the disaster. It plays a great role in disaster management in such areas as flooding, cyclones, drought, desertification, earthquake and tsunami. Space technology is largely adopted due to its cost effectiveness, short temporal orbiting and large area of coverage. Space technologies have been used in disaster management especially during the preparedness/warning and response/monitoring stages. One of the main advantages of the use of the powerful combination techniques of a GIS, is the evaluation of several hazard and risk scenarios that can be used in the decision - making about the future development of an area, and the optimum way to protect it from natural disasters.

Designing Resilience Louise K. Comfort,Arjen Boin,Chris C. Demchak.2010-09-19 In the wake of severe climatic events and terrorist acts, and the emergence of dangerous technologies, communities, nations, and global organizations have diligently sought to create strategies to prepare for such events. Designing Resilience presents case studies of extreme events and analyzes the ability of affected individuals, institutions, governments, and technological systems to cope with disaster. This volume defines resilience as it relates to disaster management at specific stages: mitigation, prevention, preparation, and response and recovery. The book illustrates models by which to evaluate resilience at levels ranging from individuals to NGOs to governmental jurisdictions and examines how resilience can be developed and sustained. A group or nation's ability to withstand events and emerge from them with their central institutions intact is at the core of resilience. Quality of response, capacity to improvise, coordination, flexibility, and endurance are also determinants. Individual case studies, including Hurricane Katrina in the United States, the London bombings, and French preparedness for the Avian flu, demonstrate effective and ineffective strategies. The contributors reveal how the complexity and global interconnectivity of modern systems—whether they are governments, mobile populations, power grids, financial systems, or the Internet—have transcended borders and created a new level of exposure that has made them especially vulnerable to extreme events. Yet these far-reaching global systems also possess the ability to alert and respond at greater speeds than ever before. The authors analyze specific characteristics of resilient systems—the qualities they possess and how they become resilient—to determine if there are ways to build a system of resilience from the ground up. As such, Designing Resilience will inform a broad range of students and scholars in areas of public administration, public policy, and the social sciences.

Managing Disaster Risks to Cultural Heritage Bijan Rouhani,Xavier Romão.2023-11-15 Managing Disaster Risks to Cultural Heritage presents case studies from different regions in the world and establishes a framework for understanding, identifying, and analysing disaster risks to immovable cultural heritage. Featuring contributions from academics and practitioners from around the globe, the book presents a comprehensive view of the scholarship relating to cultural heritage, disaster risk preparedness, and post-disaster recovery. Particular attention is given to the complex and dynamic nature of disaster risks and how they evolve during different phases of a catastrophic event, especially as hazards can create secondary effects that have greater impacts on cultural heritage, infrastructure, and economy. Arguing that risk preparedness and mitigation have historically been secondary to reactive emergency and first aid response, the book demonstrates that preparedness plans based on sound risk assessments can prevent hazards from becoming disasters. Emphasising that the protection of cultural heritage through preparedness, mitigation actions, and risk adaptation measures - especially for climate change - can contribute to the resilience of societies, the book highlights the vital role of communities in such activities. Managing Disaster Risks to Cultural Heritage will be useful to students, professionals, and scholars studying and working with cultural heritage protection. It will be of particular interest to those working in the fields of Cultural Heritage, Archaeology, Conservation and Preservation, Sustainable Development, and Disaster Studies.

Gender, Culture, and Disaster in Post-3.11 Japan Mire Koikari.2020-10-15 The Great East Japan Disaster - a compound catastrophe of earthquake, tsunami, and nuclear meltdown that began on March 11, 2011 - has ushered in a new era of cultural production dominated by discussions on safety and security, risk and vulnerability, and recovery and refortification. *Gender, Culture, and Disaster in Post-3.11 Japan* re-frames post-disaster national reconstruction as a social project imbued with dynamics of gender, race, and empire and in doing so Mire Koikari offers an innovative approach to resilience building in contemporary Japan. From juvenile literature to civic manuals to policy statements, Koikari examines a vast array of primary sources to demonstrate how femininity and masculinity, readiness and preparedness, militarism and humanitarianism, and nationalism and transnationalism inform cultural formation and transformation triggered by the unprecedented crisis. Interdisciplinary in its orientation, the book reveals how militarism, neoliberalism, and neoconservatism drive Japan's resilience building while calling attention to historical precedents and transnational connections that animate the ongoing mobilization toward safety and security. An important contribution to studies of gender and Japan, the book is essential reading for all those wishing to understand local and global politics of precarity and its proposed solutions amid the rising tide of pandemics, ecological hazards, industrial disasters, and humanitarian crises.
