Electrical Breakdown and Discharges in Gases Erich E. Kunhardt, Lawrence H. Luessen, 2013-03-09 The Advanced Study Institute on Breakdown and Discharges in Gases was held in Les Arcs, France, June 28 to July 10, 1981. The object of the Institute was to provide a broad but comprehensive presentation of the various topics in the field of Gaseous electronics. To achieve this goal, a number of lectures, seminars, and panel discussions were scheduled. Each topic was developed by two tutorial and/or review lectures, and brought to the present state of the topic by seminars and panel discussions. The program of topics and speakers was selected with the assistance of the advisory committee composed of: J. A. Rees, European Coordinator, England; M. Goldman, French Coordinator, France; A. H. Guenther, USA; M. Kristiansen, USA; and A. V. Phelps, USA. The most memorable aspect of the Institute was the sustained high interest of the faculty and participants for the two week period. The daily schedule was demanding: five hours of lectures, two hours of seminars and one of discussion. These sessions were often extended because of presentation by the participants of impromptu seminars. The discussions were intense. Majestic }10nt Blanc provided the backdrop for the lecture hall, and these surroundings and the weather contributed to the overall positive mood. It was a wonderful occasion. The lectures and seminars have been collected into two volumes.

Ionization Waves in Electrical Breakdown of Gases A.N. Lagarkov,I.M. Rutkevich,2012-12-06 In the years since the book of Lozanskii and Firsov The Theory of Spark [1975] was published, a number of experimental and theoretical studies in the physics of electric breakdown in gases were conducted. As a result of these studies, the concept of a wavelike nature of breakdown initiated by single high-voltage electric pulses or by a constant electric field was confirmed. Theoretical models in which the concept of breakdown in a constant external field was developed were first exposed in the above-named book in the chapter Development of a streamer regarded as an ionization wave, written by Rodin and Starostin. This book treats the initial stage of electric breakdown as a wave process. The wavelike nature of the phenomena under consideration is presented for streamers and sliding discharges, for electric breakdown development in long discharge tubes as well as in gas-filled gaps. Chapter 1 gives a qualitative consideration of phenomena determining the electric breakdown of gases. The experimental data and theoretical results are exposed and discussed with application to streamers, plane ionization waves, breakdown waves in long tubes, and propagation of sliding discharges. The subject of this chapter may be considered as an area of applications of different theoretical models, formulas, and estimates that are presented in other chapters of the book.

Investigations Into Electrical Discharges in Gases B. N. Klyarfel'D,2013-10-22 Investigations into Electrical Discharges in Gases is a compilation of scientific articles that covers the advances in the investigation of the fundamental processes occurring in electrical discharges in gases and vapors. The book details the different aspects of the whole life cycle of an arc, which include the initiation of a discharge, its transition into an arc, the lateral spread of the arc column, and the recovery of electric strength after extinction of an arc. The text also discusses the methods for the dynamic measurement of vapor density in the vicinity of electrical discharges, along with the method for determining the surface current density at an anode. The selection will be of great use to researchers and practitioners of disciplines that deal with basic gas discharge.
