**Critical Care Assessment by Midwives** Maureen Boyle, Judy Bothamley. 2018-06-27 Over the last ten years, pregnancy has not only become more complicated for many women, but the traditional provision of general intensive care units has been reduced. To bridge this gap, critical care units, usually staffed by midwives, have been set up in many maternity units. This textbook is an accessible and comprehensive introduction to this emerging area of practice. Critical Care Assessment by Midwives also notably sets out a template for assessment of women that will enable early identification of deteriorating health. Serious illness can arise subsequent to an emergency, a pre-existing illness or a complication of pregnancy but can also occur in the context of what appears to be a low risk pregnancy. For this reason, all midwives need to be skilled in assessment that facilitates timely, appropriate referrals and saves lives. It covers: ABCDE assessment tailored for midwives; assessment of cardiac conditions; assessment of respiratory conditions; assessment of neurological conditions; pre-eclampsia; haemorrhage; shock, including hypovolaemia, sepsis and anaphylaxis; haemodynamic monitoring; fluid replacement and balance; ketoacidosis, hypoglycaemia and sickle cell crisis. Covering the context of care, relevant pathophysiology, signs and symptoms, specific assessment in detail, relevant drugs, assessment of the fetus, summaries of

management, psychosocial support and the specific professional responsibilities of the midwife, this is an essential guide for all midwives and midwifery students.

*Public Health* Grace Edwards,Sheena Byrom.2008-04-30 Essential Midwifery Practice: Public Health highlights important developments in public health over recent years and relates the implications for midwifery practice in a clear and easily understood manner. This practical text will appeal to clinical midwives who may be unsure about the relevance of the public health agenda to their every day practice. It highlights how public health underpins every midwife's practice by using examples and case histories. It addresses a wide range of public health issues pertinent to every midwife, including: smoking in pregnancy, breastfeeding, sexual health, substance misuse, domestic abuse, perinatal mental health and vulnerable groups, poverty and social exclusion.

**Midwives, Research and Childbirth** Sarah Robinson, Ann M. Thomson. 2013-11-11 This volume is the first in a series which brings together studies of particular relevance to the care provided by midwives for childbearing women and their families. The series is intended primarily for midwives but we hope that other health professionals involved in the maternity services, as well as those who use the services, will also find the series interesting and useful. In undertaking this venture we have been fortunate in the support received from colleagues, friends and family. In particular we would like to thank the following: the editorial and production staff at Chapman and Hall in London for encouragement and advice; all the authors who have contributed to the series; colleagues at both the Nursing Research Unit, London University and the Department of Nursing Studies, Manchester University; and Paul and Rachel Robinson. This first volume is dedicated to Anne Bent, formerly Director of Education at the Royal College of Midwives and then Professional Officer for Midwifery at the United Kingdom Central Council for Nursing, Midwifery and Health Visiting. Always conscious of the need for midwifery to become a research-based profession and for midwives to be aware of the importance of research, she has made a major contribution to

initiating and facilitating developments in both these respects.

**Record Keeping for Nurses and Midwives: An essential guide** Amanda Andrews, Bernie St Aubyn. 2020-09-01 For too long, record-keeping has been considered an 'add-on' to nursing care and records are often hurriedly completed at the end of a shift, almost as an afterthought. Yet, as this helpful guide demonstrates, good record-keeping is a professional obligation and a vital part of nursing care. Records provide a channel of communication between healthcare professionals and evidence of what care was given, and when and how it was given. This evidence can help protect both nurses and patients, especially if complaints are made and an issue goes to court. The authors have over ten years' experience of training nurses on the principles of record-keeping and encouraging them to reflect and think critically and professionally about their records. They begin by introducing the general principles of record-keeping, and then explain how to ensure that records are well documented and court-proof (in other words, accepted by the legal profession). They also discuss record-keeping in practice and the increasing use of electronic patient record systems. Finally, there is a quiz to test your record-keeping knowledge. Contents include: • Preface • Introduction to record-keeping principles • Court-proofing your documents • Record-keeping in practice • Electronic patient record systems • Test your record-keeping knowledge • References • Answers to quiz
