Constellations Govert Schilling, 2019-06-04 Perfect for stargazers and armchair astronomers of all ages, CONSTELLATIONS is a beautifully illustrated, fascinating guide to all 88 constellations, including an illustrated star map for each. In CONSTELLATIONS, award-winning astronomy writer Govert Schilling takes us on an unprecedented visual tour of all 88 constellations in our night sky. Much more than just a stargazer's guide, CONSTELLATIONS is complete history of astronomy as told by Schilling through the lens of each constellation. The book is organized alphabetically by constellation. Profiles of each constellation include basic information such as size, visibility, and number of stars, as well as information on the discovery and naming of the constellation and associated lore. Beyond details about the constellation itself is information about every astronomical event that took place or discovery made in the vicinity of the constellation. In the constellation of Cygnus (the Swan) we encounter the location of the first confirmed black hole. A stop at Gemini (the Twins) is a chance to say hello to the dwarf planet Pluto, and in Orion (the hunter) we find the location of the first identified gamma-ray burst. Stunning star maps throughout the book by acclaimed star mapmaker Wil Tirion show us the exact location of every constellation, the details of its structure, as well as its surrounding astronomical neighbors.

Constellations Dana Meachen Rau, 2005 Discusses the history of constellations, early astronomers, and the purpose of using constellations.

Constellations Gregory Vogt, 2003-09 Describes some of the constellations that can be seen in the night sky, including how to use constellations to find specific stars.

Uncharted Constellations John C. Barentine, 2016-04-04 This book compiles an array of interesting constellations that fell by the wayside before the IAU established the modern canon of constellations. That decision left out lesser known ones whose history is nevertheless interesting, but at last author John Barentine is giving them their due. This book is a companion to *The Lost Constellations*, highlighting the more obscure configurations. The 16 constellations found in this volume fall into one or more of three broad categories: asterisms, such as the Big Dipper in Ursa Major; single-sourced constellations introduced on surviving charts by a cartographer perhaps currying the favor of sponsors; and re-brands, new figures meant to displace existing constellations, often for an ideological reason. All of them reveal something unique about the development of humanity's map of the sky.

The Kids' Guide to the Constellations Christopher Forest,2011-07 Describes various constellations, including the myths surrounding them and how to locate them in the night sky--Provided by publisher.

The Constellations Lloyd Motz,Carol Nathanson,1988 Explains the history, mythology, and science that make up the discipline of astronomy. Every constellation, from Andromeda to Virgo, is discussed and every important star, from Betelgeuse to Sirius, is explored.

Stories of the Constellations Kieron Connolly,2014-09-01 The stories behind the 12 star signs (such as the Gemini twins, the Taurus bull), along with more than 25 other characters from mythology who also have a place in the heavens, such as Perseus carrying Medusa's head of snakes, three-headed dog Cerberus and hero Hercules fighting the dragon Draco.

Constellations Sinéad Gleeson,2020-03-24 The #1 Irish bestseller and winner of Non-Fiction Book of the Year at the 2019 An Post Irish Book Awards, winner of the 2020 Dalkey Literary Awards, named Best Book of the Year by the Guardian, Observer, Image, Irish Times, New Statesman, and Irish Independent, Sinéad Gleeson's essays chronicle—in crystalline, tender, powerful prose—life in a body as it goes through sickness, health, motherhood, and love of all kinds. I have come to think of all the metal in my body as artificial stars, glistening beneath the skin, a constellation of old and new metal. A map, a tracing of connections and a guide to looking at things from different angles. We treat the body as an afterthought, until it no longer can be. Until the pain or the pleasure is too great. Sinéad Gleeson's life has been marked by terrible illness, including leukemia and debilitating arthritis. As a child, she bathed in the springs of Lourdes, ever hopeful that her body would cooperate, ever looking forward to the day when she could take her body for granted. But just as she turns inward to explore her own pain, and then the marvel of recovery, and then the arrival of her greatest joys—falling in love, becoming a mother—she turns her gaze outward. She delves into history, art, literature, and music, plotting the intimate experience of life in a women's body across a wide-ranging map. From Nick Cave to Taylor Swift, Botticelli to Frida Kahlo, Louisa May Alcott to Lucy Grealy, *Constellations* is an investigation into the different ways of seeing, both uniquely personal and universal in its resonances. In the tradition of some of our finest life writers, Gleeson explores—in her own spirited, generous

voice—the fierceness of being alive. She has written “a book [that] every woman should read” (Eimear McBride).
