My Thoughts Charles de Secondat baron de Montesquieu.2012 My Thoughts provides a unique window into the mind of one of the undisputed pioneers of modern thought, the author of the 1748 classic, The Spirit of the Laws. From the publication in 1721 of his first masterpiece, Persian Letters, until his death in 1755, Montesquieu maintained notebooks in which he wrote and dictated ideas on a wide variety of topics. Some of the contents are early drafts of passages that Montesquieu eventually placed in his published works; others are outlines or early versions of projected works that were ultimately lost, unfinished, or abandoned. These notebooks provide important insights into his views on a broad range of topics, including morality, religion, history, law, economics, finance, science, art, and constitutional liberty. Montesquieu called these notebooks Mes Pensées (My Thoughts), and they appear in their entirety in English for the first time in this Liberty Fund edition. Editor and translator Henry C. Clark provides readers with translations of most of the footnotes contained in the 1991 French edition by Louis Desgraves, while adding new notes, a bibliography, and other aids to understanding the text and translation. These features provide the frame for a revealing portrait of one of the most influential figures of the eighteenth century. Henry C. Clark is a Visiting Professor in the Political Economy Project at Dartmouth College. He has written two books and numerous articles, mainly on the French and Scottish Enlightenments.

Mathematical Recreations and Essays W. W. Rouse Ball. 2018-07-11 Mathematical Recreations and Essays W. W. Rouse Ball For nearly a century, this sparkling classic has provided stimulating hours of entertainment to the mathematically inclined. The problems posed here often involve fundamental mathematical methods and notions, but their chief appeal is their capacity to tease and delight. In these pages you will find scores of recreations to amuse you and to challenge your problem-solving faculties-often to the limit. Now in its 13th edition, Mathematical Recreations and Essays has been thoroughly revised and updated over the decades since its first publication in 1892. This latest edition retains all the remarkable character of the original, but the terminology and treatment of some problems have been updated and new material has been added. Among the challenges in store for you: Arithmetical and geometrical recreations; Polyhedra; Chess-board recreations; Magic squares; Map-coloring problems; Unicursal problems; Cryptography and cryptanalysis; Calculating prodigies; ... and more. You'll even find problems which mathematical ingenuity can solve but the computer cannot. No knowledge of calculus or analytic geometry is necessary to enjoy these games and puzzles. *The Stiglitz Report* Joseph E. Stiglitz, United Nations. 2010 The fact that the global economy is broken may be widely accepted, but what precisely needs to be fixed has become the subject of enormous controversy. In 2008, the President of the United Nations General Assembly convened an international panel, chaired by Nobel Prize-winning economist Joseph Stiglitz and including 20 leading experts on the international monetary system, to address this crucial issue. This report controversially establishes a bold agenda for policy change, both broad in scope and profound in its ambitions.

*Research Methodologies and Ethical Challenges in Digital Migration Studies* Marie Sandberg, Luca Rossi, Vasilis Galis, Martin Bak Jørgensen. 2021-11-23 This Open Access book investigates the methodological and ethical dilemmas involved when working with digital technologies and large-scale datasets in relation to ethnographic studies of digital

migration practices and trajectories. Digital technologies reshape not only every phase of the migration process itself (by providing new ways to access, to share and preserve relevant information) but also the activities of other actors, from solidarity networks to border control agencies. In doing so, digital technologies create a whole new set of ethical and methodological challenges for migration studies: from data access to data interpretation, privacy protection, and research ethics more generally. Of specific concern are the aspects of digital migration researchers accessing digital platforms used by migrants, who are subject to precarious and insecure life circumstances, lack recognised papers and are in danger of being rejected and deported. Thus, the authors call for new modes of caring for (big) data when researching migrants' digital practices in the configuration of migration and borders. Besides taking proper care of research participants' privacy, autonomy, and security, this also spans carefully establishing analytically sustainable environments for the respective data sets. In doing so, the book argues that it is essential to carefully reflect on researchers' own positioning as being part of the challenge they seek to address.

**The World's Stateless 2020: Deprivation of Nationality** Institute On Statelessness and in (Isi).2020-04-30 This edition of ISI's flagship report, *The World's Stateless 2020*, explores the issue of citizenship deprivation. Various experts and organisations have contributed material - essays, interviews, reflections and more - collectively forming a truly interdisciplinary view on the subject. The report also includes the Principles on Deprivation of Nationality as a National Security Measure. As with every edition, the report also offers an overview of the state of statelessness globally in 2020.

**Prisons in the Late Ottoman Empire** Kent F. Schull.2014-04-11 Contrary to the stereotypical images of torture, narcotics and brutal sexual abuse traditionally associated with Ottoman or 'Turkish' prisons, Kent Schull argues that, during the Second Constitutional Period (1908-1918), they played a crucial role in attempts to transform the empire.

**The Technological and Economic Future of Nuclear Power** Reinhard Haas, Lutz Mez, Amela Ajanovic. 2019-01-01 This open access book discusses the eroding economics of nuclear power for electricity generation as well as technical, legal, and political acceptance issues. The use of nuclear power for electricity generation is still a heavily disputed issue. Aside from technical risks, safety issues, and the unsolved problem of nuclear waste disposal, the economic performance is currently a major barrier. In recent years, the costs have skyrocketed especially in the European countries and North America. At the same time, the costs of alternatives such as photovoltaics and wind power have significantly decreased. Contents History and Current Status of the World Nuclear Industry The Dramatic Decrease of the Economics of Nuclear Power Nuclear Policy in the EU The Legacy of Chernobyl and Fukushima Nuclear Waste and Decommissioning of Nuclear Power Plants Alternatives: Heading Towards Sustainable Electricity Systems Target Groups Researchers and students in the fields of political, economic and technical sciences Energy (policy) experts, nuclear energy experts and practitioners, economists, engineers, consultants, civil society organizations The Editors Prof. Dr. Reinhard Haas is University Professor of energy economics at the Institute of Energy Systems and Electric Drives at Technische Universität Wien, Austria. PD Dr. Lutz Mez is Associate Professor at the Department for Political and Social Sciences of Freie Universität Berlin, Germany. *The Biophysics of Cell Membranes* Richard M. Epanand, Jean-Marie Ruyschaert. 2017-09-25 This volume focuses on the modulation of biological membranes by specific biophysical properties. The readers are introduced to emerging biophysical approaches that mimick specific states (like membrane lipid asymmetry, membrane curvature, lipid flip-flop, lipid phase

separation) that are relevant to the functioning of biological membranes. The first chapter describes innovative methods to mimic the prevailing asymmetry in biological membranes by forming asymmetrical membranes made of monolayers with different compositions. One of the chapters illustrates how physical parameters, like curvature and elasticity, can affect and modulate the interactions between lipids and proteins. This volume also describes the sensitivity of certain ion channels to mechanical forces and it presents an analysis of how cell shape is determined by both the cytoskeleton and the lipid domains in the membrane. The last chapter provides evidence that liposomes can be used as a minimal cellular model to reconstitute processes related to the origin of life. Each topic covered in this volume is presented by leading experts in the field who are able to present clear, authoritative and up-to-date reviews. The novelty of the methods proposed and their potential for a deeper molecular description of membrane functioning are particularly relevant experts in the areas of biochemistry, biophysics and cell biology, while also presenting clear and thorough introductions, making the material suitable for students in these fields as well.

**High Resolution Imaging in Microscopy and Ophthalmology** Josef F. Bille.2019-08-13 This open access book provides a comprehensive overview of the application of the newest laser and microscope/ophthalmoscope technology in the field of high resolution imaging in microscopy and ophthalmology. Starting by describing High-Resolution 3D Light Microscopy with STED and RESOLFT, the book goes on to cover retinal and anterior segment imaging and image-guided treatment and also discusses the development of adaptive optics in vision science and ophthalmology. Using an interdisciplinary approach, the reader will learn about the latest developments and most up to date technology in the field and how these translate to a medical setting. High Resolution Imaging in Microscopy and Ophthalmology - New Frontiers in Biomedical Optics has been written by leading experts in the field and offers insights on engineering, biology, and medicine, thus being a valuable addition for scientists, engineers, and clinicians with technical and medical interest who would like to understand the equipment, the applications and the medical/biological background. Lastly, this book is dedicated to the memory of Dr. Gerhard Zinser, co-founder of Heidelberg Engineering GmbH, a scientist, a husband, a brother, a colleague, and a friend.

Performance Autoethnography Norman K. Denzin.2018-04-20 This book is a manifesto. It is about rethinking performance autoethnography, about the formation of a critical performative cultural politics, about what happens when everything is already performative, when the dividing line between performativity and performance disappears. This is a book about the writing called autoethnography. It is also about what this form of writing means for writers who want to perform work that leads to social justice. Denzin's goal is to take the reader through the history, major terms, forms,

criticisms and issues confronting performance autoethnography and critical interpretive. To that end many of the chapters are written as performance texts, as ethnodramas. A single thesis organizes this book: the performance turn has been taken in the human disciplines and it must be taken seriously. Multiple informative performance models are discussed: Goffman's dramaturgy; Turner's performance anthropology; performance ethnographies by A. D. Smith, Conquergood, and Madison; Saldana's ethnodramas; Schechter's social theatre; Norris's playacting; Boal's theatre of the oppressed; and Freire's pedagogies of the oppressed. They represent different ways of staging and hence performing ethnography, resistance and critical pedagogy. They represent different ways of imagining, and inventing and hence performing alternative imaginaries, alternative counter-performances to war, violence, and the globalized corporate empire (Schechner 2015). This book provides a systematic treatment of the origins, goals, concepts, genres, methods, aesthetics, ethics and truth conditions of critical performance autoethnography. Denzin uses the performance text as a vehicle for taking up the hard questions about reading, writing, performing and doing critical work that makes a difference.

China, the Health Sector Dean T. Jamison.1984 This review of China's health sector begins by noting China's achievements in population control, health status, and nutrition. The policies, sources of financing, and resource use that have contributed to China's successes are cited, and the evolution of several influences on health from outside the sector are discussed, including nutritional improvements, greater access to clean water and sanitary waste disposal, and fertility reduction. Two major challenges now face China's health sector: (i) extending the methods that have been successful to areas where mortality rates and deaths due to infectious diseases remain high; and (ii) developing and implementing approaches to management of chronic disease that combine prevention, low-cost treatment, rehabilitation, and humane care. Major innovation will be essential because resources are limited and plans for meeting the health needs of the population are ambitious. Institutions capable of innovation, experimentation, and analysis of public health problems must be developed. The report includes discussion of specific issues in the sector.

**André Bazin, the Critic as Thinker** R. J. Cardullo.2017-01-28 André Bazin (1918-58) is credited with almost single-

handedly establishing the study of film as an accepted intellectual pursuit, as well as with being the spiritual father of the French New Wave. Among those who came under his tutelage were four who would go on to become the most renowned directors of the postwar French cinema: François Truffaut, Jean-Luc Godard, Jacques Rivette, and Claude Chabrol. Bazin can also be considered the principal instigator of the equally influential auteur theory: the idea that, since film is an art form, the director of a movie must be perceived as the chief creator of its unique cinematic style. André Bazin, the Critic as Thinker: American Cinema from Early Chaplin to the Late 1950s contains, for the first time in English in one volume, much if not all of Bazin's writings on American cinema: on directors such as Orson Welles, Charles Chaplin, Preston Sturges, Alfred Hitchcock, Howard Hawks, John Huston, Nicholas Ray, Erich von Stroheim, and Elia Kazan; and on films such as High Noon, Citizen Kane, Rear Window, Limelight, Scarface, Niagara, The Red Badge of Courage, Greed, and Sullivan's Travels. André Bazin, the Critic as Thinker: American Cinema from Early Chaplin to the Late 1950s also features a sizable scholarly apparatus, including a contextual introduction to Bazin's life and work, a complete bibliography of Bazin's writings on American cinema, and credits of the films discussed. This volume thus represents a major contribution to the still growing academic discipline of cinema studies, as well as a testament to the continuing influence of one of the world's pre-eminent critical thinkers.

Research Questions in Language Education and Applied Linguistics Hassan Mohebbi, Christine Coombe. 2022-01-14 This volume encompasses the range of research questions on language-related problems that arise in language teaching, learning and assessment. The [150] chapters are written by experts in the field who each offer their insights into current and future directions of research, and who suggest several highly relevant research questions. Topics include, but are not limited to: language skills teaching, language skills assessment and testing, measurement, feedback, discourse analysis, pragmatics, semantics, language learning through technology, CALL, MALL, ESP, EAP, ERPP, TBLT, materials development, genre analysis, needs analysis, corpus, content-based language teaching, language teaching and learning strategies, individual differences, research methods, classroom research, form-focused instruction, age effects, literacy, proficiency, and teacher education and teacher development. The book serves as a reference and offers inspiration to researchers and students in language education. An important skill in reviewing the research literature is following a study's "plan of attack." Broadly, this means that before accepting and acting upon the findings, one considers a) the research question (Is it clear and focused? Measurable?), b) the subjects examined, the methods deployed, and the measures chosen (Do they fit the study's goal and have the potential to yield useful results?), and c) the analysis of the data (Do the data lead to the discussion presented? Has the author reasonably interpreted results to reach the conclusion?). Mohebbi and Coombe's book, *Research Questions in Language Education and Applied Linguistics: A Reference Guide*, helps budding researchers take the first step

and develop a solid research question. As the field of language education evolves, we need continual research to improve our instructional and assessment practices and our understanding of the learners' language learning processes. This book with its remarkable 150 topics and 10 times the number of potential research questions provides a wealth of ideas that will help early career researchers conduct studies that move our field forward and grow our knowledge base. Deborah J. Short, Ph.D., Director, Academic Language Research & Training, Past President, TESOL International Association (2021-22) As a teacher in graduate programs in TESOL I frequently come across the frustration of students at centering their research interests on a particular topic and developing research questions which are worth pursuing so as to make a contribution to the field. This frustration stems from the fact that our field is so vast and interrelated, that it is often impossible to properly address all that interests them. Hence, I wholeheartedly welcome this most relevant and innovative addition to the research literature in the field of TESOL and Applied Linguistics. Coombe and Mohebbi have created a real tour de force that stands to inform budding researchers in the field for many years to come. Additionally, the cutting-edge depiction of the field and all it has to offer will no doubt update the research agendas of many seasoned researchers around the world. The 150 chapters are organized in a most powerful, yet, deceptively simple way offering a positioning within the topic, suggesting questions that might direct inquiry and offering a basic set of bibliographic tools to start the reader in the path towards research. What is more, the nine sections in which the chapters are organized leave no area of the field unexplored. **Markets Not Capitalism** Gary Chartier, Charles W. Johnson. 2011 'Markets Not Capitalism' explores the gap between radically freed markets and the capitalist-controlled markets that prevail today. **The Future of Ideas** Lawrence Lessig. 2002-10-22 The Internet revolution has come. Some say it has gone. In The Future of Ideas, Lawrence Lessig explains how the revolution has produced a counterrevolution of potentially devastating power and effect. Creativity once flourished because the Net protected a commons on which widest range of innovators could experiment. But now, manipulating the law for their own purposes, corporations have established themselves as virtual gatekeepers of the Net while Congress, in the pockets of media magnates, has rewritten copyright and patent laws to stifle creativity and progress. Lessig weaves the history of technology and its relevant laws to make a lucid and accessible case to

protect the sanctity of intellectual freedom. He shows how the door to a future of ideas is being shut just as technology is creating extraordinary possibilities that have implications for all of us. Vital, eloquent, judicious and forthright, *The Future of Ideas* is a call to arms that we can ill afford to ignore.

**Improving Food Safety Through a One Health Approach** Institute of Medicine, Board on Global Health, Forum on Microbial Threats. 2012-10-10 Globalization of the food supply has created conditions favorable for the emergence, reemergence, and spread of food-borne pathogens-compounding the challenge of anticipating, detecting, and effectively responding to food-borne threats to health. In the United States, food-borne agents affect 1 out of 6 individuals and cause approximately 48 million illnesses, 128,000 hospitalizations, and 3,000 deaths each year. This figure likely represents just the tip of the iceberg, because it fails to account for the broad array of food-borne illnesses or for their wide-ranging repercussions for consumers, government, and the food industry-both domestically and internationally. A One Health approach to food safety may hold the promise of harnessing and integrating the expertise and resources from across the spectrum of multiple health domains including the human and veterinary medical and plant pathology communities with those of the wildlife and aquatic health and ecology communities. The IOM's Forum on Microbial Threats hosted a public workshop on December 13 and 14, 2011 that examined issues critical to the protection of the nation's food supply. The workshop explored existing knowledge and unanswered questions on the nature and extent of food-borne threats to health. Participants discussed the globalization of the U.S. food supply and the burden of illness associated with foodborne threats to health; considered the spectrum of food-borne threats as well as illustrative case studies; reviewed existing research, policies, and practices to prevent and mitigate foodborne threats; and, identified opportunities to reduce future threats to the nation's food supply through the use of a One Health approach to food safety. *Improving Food Safety Through a One Health Approach: Workshop Summary* covers the events of the workshop and explains the recommendations for future related workshops.

**Housing New York 2.0** .2017 Since Mayor de Blasio launched the Housing New York Plan in 2014, New York City has accelerated the construction and preservation of affordable housing to levels not seen in 30 years. We are on track to secure more affordable housing in the first four years of the Administration than in any comparable period since 1978. The City has tripled the share of affordable housing for households earning less than \$25,000. Funding for housing construction and preservation has doubled, as have the number of homes in the City's affordable housing lotteries each year. Hundreds of once-vacant lots have affordable homes rising on them today. Reforms to zoning and tax programs are not just incentivizing, but mandating affordable apartments—paid for by the private sector—in new development. --Page 4.

**100 photos pour la liberté de la presse** Peter Lindbergh.2014 Peter Lindbergh est né le 23 novembre 1944 à Lissa, en Allemagne, et vit actuellement entre Paris, New York et Arles. Depuis les années 80, il est l'un des observateurs les plus renommés de l'univers de la mode. Ses photographies en noir et blanc au langage pictural puisent leur inspiration dans les débuts du cinéma allemand et la danse libre des années 1920. À 18 ans, il s'installe quelques mois en Suisse avant de quitter Lucerne pour Berlin, où il suit des cours du soir à l'Académie des Beaux-Arts. Suivant les traces de Vincent van Gogh, son idole, il se rend à Arles en stop, poursuivant son périple jusqu'en Espagne puis au Maroc, cela sur une période de deux ans. De retour en Allemagne, il étudie la Peinture Libre à l'École d'art de Krefeld (Rhénanie du Nord-Westphalie). En 1969, alors qu'il est encore étudiant, il expose pour la première fois son travail dans la célèbre galerie Denise René/Hans Mayer. En 1971, il se tourne vers la photographie et travaille pendant deux ans en tant qu'assistant d'Hans Lux, photographe basé à Düsseldorf. Il arrive à Paris en 1978, où il commence à travailler à l'international pour Vogue (éditions Italie, Royaume-Uni, France, Allemagne, États-Unis), The New Yorker, Vanity Fair, Allure et Rolling Stone. En 1992, il signe un contrat de quatre ans avec l'American Harper's Bazaar de New York. À la même période, il réalise les campagnes Giorgio Armani, Jil Sander, Prada, Donna Karan, Calvin Klein et Comme des Garçons. Regulation of Genome Editing in Plant Biotechnology Hans-Georg Dederer,David Hamburger.2019-08-16 This book provides in-depth insights into the regulatory frameworks of five countries and the EU concerning the regulation of genome edited plants. The country reports form the basis for a comparative analysis of the various national regulations governing genetically modified organisms (GMOs) in general and genome edited plants in particular, as well as the underlying regulatory approaches.The reports, which focus on the regulatory status quo of genome edited plants in Argentina, Australia, Canada, the EU, Japan and the USA, were written by distinguished experts following a uniform structure. On this basis, the legal frameworks are compared in order to foster a rational assessment of which approaches could be drawn upon to adjust, or to completely realign, the current EU regime for GMOs. In addition, a separate chapter identifies potential best practices for the regulation of plants derived from genome editing.

*Climate Change and Aviation* Stefan Gossling,Paul Upham.2012-05-04 'This is a timely, challenging and fascinating book on a topic of central importance to the success or otherwise of our climate change policies. It sets down a clear marker for what has to be done in the aviation sector.' Professor John Whitelegg, Stockholm Environment Institute, University of York, UK 'Climate Change and Aviation presents a clear picture of the transport sector's greatest challenge: how to reconcile aviation's immense popularity with its considerable environmental damage and its dependence on liquid hydrocarbon energy sources. This book avoids wishful thinking and takes the much harder, but more productive, path of considering difficult solutions that clash with short-term and short-sighted expectations about the unlimited growth potential for flying.' Professor Anthony Perl, Urban Studies Program, Simon Fraser University, Canada 'A convincing and timely collection that brings together an impressive range of expertise. The book integrates various perspectives into a powerful core argument - we must do something, and quickly, to tackle the impact of aviation on our environment. The authors recognise the political difficulties associated with promoting change but present constructive options for policy makers. Required reading, especially for transport ministers set on promoting the growth of air travel.' Professor Jon Shaw, Director of the Centre for Sustainable Transport, University of Plymouth, UK Trends such as the massive growth in availability of air travel and air freight are among those which have led to aviation becoming one of the fastest growing emitters of greenhouse gases. These trends have also caused a shift in expectations of how we do business, where we go on holiday, and what food and goods we can buy. For these reasons aviation is (and is set to stay) high up on global political, organizational and media agendas. This textbook is the first to attempt a comprehensive review of the topic, bringing together an international team of leading scientists. Starting with the science of the environmental issues, it moves on to cover drivers and trends of growth, socio-economics and politics, as well as mitigation options, the result being a broad yet detailed examination of the field. This is essential reading for undergraduate and postgraduate courses in transport, tourism, the environment, geography and

beyond, while also being a valuable resource for professionals and policymakers seeking a clear understanding of this complex yet urgently pressing issue.

Digital Roots Gabriele Balbi, Nelson Ribeiro, Valérie Schafer, Christian Schwarzenegger. 2021-09-07 As media environments and communication practices evolve over time, so do theoretical concepts. This book analyzes some of the most well-known and fiercely discussed concepts of the digital age from a historical perspective, showing how many of them have pre-digital roots and how they have changed and still are constantly changing in the digital era. Written by leading authors in media and communication studies, the chapters historicize 16 concepts that have become central in the digital media literature, focusing on three main areas. The first part, Technologies and Connections, historicises concepts like network, media convergence, multimedia, interactivity and artificial intelligence. The second one is related to Agency and Politics and explores global governance, datafication, fake news, echo chambers, digital media activism. The last one, Users and Practices, is finally devoted to telepresence, digital loneliness, amateurism, user generated content, fandom and authenticity. The book aims to shed light on how concepts emerge and are co-shaped, circulated, used and reappropriated in different contexts. It argues for the need for a conceptual media and communication history that will reveal new developments without concealing continuities and it demonstrates how the analogue/digital dichotomy is often a misleading one.
