Anaesthesiologische Probleme in der Gefäßchirurgie P. Revesz, L. Schmetterer, V.M. Zolotarev, 2012-12-06 The first Pannonian Symposium on Mathematical Statistics was held at Bad Tatzmannsdorf (Burgenland/Austria) from September 16th to 21st, 1979. The aim of it was to further and intensify scientific cooperation in the Pannonian area, which, in a broad sense, can be understood to cover Hungary, the eastern part of Austria, Czechoslovakia, and parts of Poland, Yugoslavia and Romania. The location of centers of research in mathematical statistics and probability theory in this territory has been a good reason for the geographical limitation of this meeting. About 70 researchers attended this symposium, and 49 lectures were delivered; a considerable part of the presented papers is collected in this volume. Beside the lectures, vigorous informal discussions among the participants took place, so that many problems were raised and possible ways of solutions were attacked. We take the opportunity to thank Dr. U. Dieter (Graz), Dr. F. Konecny (Wien), Dr. W. Krieger (Göttingen) and Dr. E. Neuwirth (Wien) for their valuable help in the refereeing work for this volume. The Pannonian Symposium could not have taken place without the support of several institutions: The Austrian Ministry for Research and Science, the State government of Burgenland, the Community Bad Tatzmannsdorf, the Kurbad Tatzmannsdorf AG, the Austrian Society for Information Science and Statistics, IBM Austria, Volksbank Oberwart, Erste Österreichische Spar-Casse and Spielbanken AG Austria. The Austrian Academy of Sciences iv made possible the participation in the Symposium for several mathematicians. We express our gratitude to all these institutions for their generous help.

Acute Peripheral Vascular Surgery Michael Staudacher, 2012-12-06 During the past three decades, Vascular Surgery has emerged as a specialty within general surgery. Fellowships are now available to equip surgeons with specialized skills for managing various vascular problems. Nevertheless, the vascular surgical emergency, one of the greatest challenges in surgical management, may occur suddenly and at a time and place remote from the highly qualified vascular surgeon or a specialized center where complex vascular treatment is routine. The initial evaluation and treatment must be undertaken by

a general surgeon who determines the extent, severity, and urgency of the problem at hand, and hopefully will arrange appropriate transfer to a specialized center if the patient's condition permits. Urgent problems, on the other hand, demand immediate surgical intervention by the general surgeon if any hope for salvage is to occur. It is in this setting that this volume offered by Professor Staudacher may be of assistance to the general surgeon whose experience in this type of emergency may be limited. This concise, well illustrated volume should serve as a guide to manage the peripheral vascular emergency involving either the arterial or venous system.

Gender and Recovery from Coronary Artery Bypass Surgery Friederike Kendel,2009-01-24 Progress in coronary artery bypass graft surgery has irrefutably improved the quality of life of many patients. However, we are confronted with the finding that women exhibit a higher mortality rate than men. In part, this difference can be explained by clinical parameters such as age, disease severity, or comorbidity - factors that have been well studied, but which do not fully explain the observed differences. This is one reason why, in recent years, psychosocial variables have attracted special attention in this context. In fact, women and men having undergone a bypass operation vary a great deal with respect to, e. g. , depression, partner status, and socio-economic status. Moreover, psychological well-being, on the one hand, and social isolation, on the other hand, definitely influence the recovery process, particularly when considered under the gender aspect. The Deutsches Herzzentrum Berlin has been actively supporting gender-specific research for many years. In this context, a large prospective study on gender differences in recovery after bypass surgery, carried out by the Competence Network of Heart Failure, was started at our Department for Cardiothoracic and Vascular Surgery. From the beginning of the study, psychosocial variables were included as being substantial contributors. The starting point of the study presented here* by psychologist Dr. Friederike Kendel are recent empirical investigations about gender differences in coronary heart disease and the course of recovery after bypass surgery.

Surgery of the Deep Femoral Artery Marco P. Merlini,J.A.M. van Dongen,Michael Dusmet,1994-09-28 Circulation through the deep femoral artery and its branches is critical to patients with aortoiliac and infrainguinal arteriosclerosis. It is, accordingly, essential that all physicians who are seriously interested in treating patients with lower extremity ischemia have a good working knowledge of this crucial artery's anatomy and function. It is equally essential that they be aware of

arteriosclerotic disease patterns that involve this important artery, how these patterns can be accurately defined, and, most importantly, what therapeutic options are available and when they should be used. All this important information relating to the deep femoral artery and its surgical significance is included in Dr. Merlini's fine volume. Eighteen authors have contributed 11 well-edited and nicely illustrated chapters that provide all the facts that the committed vascular surgeon would ever want to know about the deep femoral artery and how it should be managed in patients with lower limb ischemia. Although some of the chapters overlap in some areas, this adds to the value of the book since the different authors are all acknowledged experts and their varying perspectives are beneficial to a reader seeking to formulate his own unbiased views.
