**Hépatite B** Daniel Dhumeaux.2012-12-12 Trois cent cinquante millions de porteurs chroniques dans le monde, environ un million de décès chaque année, un vaccin efficace mais décrié en France, des traitements de plus en plus performants mais inaccessibles dans les régions les plus touchées par l'endémie... Près d'un demi-siècle après la découverte du virus de l'hépatite B, les défis posés par l'infection restent considérables. L'estimation récente de l'Institut de veille sanitaire a montré que la prévalence de l'infection par le virus de l'hépatite B était voisine de celle de l'infection par le virus de l'hépatite C en France. Les populations migrantes et les couches les plus défavorisées de la société sont les plus touchées. Le développement récent de molécules antivirales puissantes possédant une barrière génétique élevée contre la résistance permet en théorie de contrôler la très grande majorité des hépatites chroniques B. Cependant, l'obligation de traiter longtemps, sans doute à vie, une infection a priori incurable pose des problèmes difficiles d'indication thérapeutique, d'observance et de résistance. Aux campagnes de vaccination massive des nouveau-nés, enfants et adolescents dans la plupart des pays d'Asie, d'Europe et d'Afrique, la France oppose un décalage qui devrait être rapidement corrigé. La publication d'un ouvrage de référence sur l'hépatite B, après celui sur l'hépatite C, s'imposait donc. Les meilleurs spécialistes français se sont réunis pour faire le point sur les connaissances les plus récentes, sous l'oeil bienveillant de Harvey Alter, co-découvreur du virus de l'hépatite B avec Baruch Blumberg, prix Nobel de Médecine, alors que l'European Association for the Study of the Liver (EASL) publiait ses premières recommandations de pratiques cliniques sur la prise en charge de l'hépatite chronique B et que notre ministre lançait, pour les années 2009-2012, un nouveau plan de lutte contre les hépatites virales.

La publication de cet ouvrage arrive, nous semble-t-il, bien à propos.

A National Strategy for the Elimination of Hepatitis B and C National Academies of Sciences, Engineering, and Medicine,Health and Medicine Division,Board on Population Health and Public Health Practice,Committee on a National Strategy for the Elimination of Hepatitis B and C.2017-07-30 Hepatitis B and C cause most cases of hepatitis in the United States and the world. The two diseases account for about a million deaths a year and 78 percent of world's hepatocellular carcinoma and more than half of all fatal cirrhosis. In 2013 viral hepatitis, of which hepatitis B virus (HBV) and hepatitis C virus (HCV) are the most common types, surpassed HIV and AIDS to become the seventh leading cause of death worldwide. The world now has the tools to prevent hepatitis B and cure hepatitis C. Perfect vaccination could eradicate HBV, but it would take two generations at least. In the meantime, there is no cure for the millions of people already infected. Conversely, there is no vaccine for HCV, but new direct-acting antivirals can cure 95 percent of chronic infections, though these drugs are unlikely to reach all chronically-infected people anytime soon. This report, the second of two, builds off the conclusions of the first report and outlines a strategy for hepatitis reduction over time and specific actions to achieve them.

**Guidelines on Hepatitis B and C Testing** World Health Organization.2017 Testing and diagnosis of hepatitis B (HBV) and C (HCV) infection is the gateway for access to both prevention and treatment services, and is a crucial component of an effective response to the hepatitis epidemic. Early identification of persons with chronic HBV or HCV infection enables them to receive the necessary care and treatment to prevent or delay progression of liver disease. Testing also provides an opportunity to link people to interventions to reduce transmission, through counselling on risk behaviors and provision of prevention commodities (such as sterile needles and syringes) and hepatitis B vaccination. These are the first WHO guidelines on testing for chronic HBV and HCV infection and complement published guidance by WHO on the prevention,

care and treatment of chronic hepatitis C and hepatitis B infection. These guidelines outline the public health approach to strengthening and expanding current testing practices for HBV and HCV, and are intended for use across age groups and populations.

Diagnostic Molecular Pathology William B. Coleman, Gregory J. Tsongalis. 2023-10-27 Diagnostic Molecular Pathology: A Guide to Applied Molecular Testing, Second Edition assembles a group of experts to discuss the molecular basis and mechanisms of major human diseases and disease processes and how the molecular features of disease can be harnessed to develop practical molecular tests for disease detection, diagnosis and prognosis. The book explains how molecular tests are utilized in the treatment of patients in personalized medicine, highlights new technologies and approaches of applied molecular pathology, and discusses how this discovery-based research yields new and useful biomarkers and tests. As it is essential to stay up-to-date on new molecular diagnostics in this changing field, this book covers critically important areas in the practice of personalized medicine and reflects our understanding of the pathology, pathogenesis and pathophysiology of human disease. Includes new material on mass spectrometry for infectious diseases, microbiome, homology-directed repair for PARPi, whole genome sequencing for constitutional testing, and much more Provides insights on the value of the molecular test in comparison to traditional methods, which include speed, precision, sensitivity and clinical impacts for the patient Focuses on the menu of molecular diagnostic tests available in modern molecular pathology or clinical laboratories that can be applied to disease detection, diagnosis and classification in the clinical workup of a patient Explains how molecular tests are utilized to guide the treatment of patients in personalized medicine (guided therapies) and for the prognostication of disease
