**Rice** Bor S. Luh.2013-11-11 Rice is one of the principal cereals used by the world's inhabitants. The hope for improved nourishment of the world's population depends on the development of better rice varieties and improved methods for rice production and utilization. During the past four decades, interest in rice research and production has increased in many countries. The development of new and better varieties by the International Rice Research Institute in the Philippines and other rice research institutes has stimulated numerous research stations to test the performance of these varieties in many countries under different climates, soil properties, cultural practices, and environmental conditions. The methods of harvesting, handling, drying, and milling rough rice have improved as a result of research efforts by the engineers and the rice milling industries. The first edition of *Rice: Production and Utilization* was published in 1980. This second edition presents the recent developments and progress made by the researchers, the industries, and various experiment stations. Because of the large amounts of literature available in recent years on rice production and utilization, this edition is divided into two volumes, Volume 1: Production and Volume II: Utilization. It is hoped that the books will be useful to rice researchers, processors, and people interested in rice production and utilization. Those studying v vi PREFACE the agronomy of rice plants, especially the genetics, breeding, cultivation, diseases, and insects that attack both the rice plant and the stored grain, will find this edition helpful in their search for new knowledge.

New Approach in Seed Quality Maintenance of Rice Anuj Kumar Rai,Asit Kumar Basu.2012-05 History continuous to be a story of a hungry man in search of food. Our life and health depend on seeds and their products because seed is a miniature of plant and a nice creation of nature. Rice is one of the most important staple foods of the world, approximately more than half of the world's population utilize it in various forms. Increasing food insecurity in the highly demographic pressured countries like India and China are strived to maintain their dietary need. As we know one of the most important factors of production, land is limited, only we have a tangible option of quality seed which is the symbol and foundation of good agriculture to grow more. An old saying As you sow, so you reap. In rice crop number of seedling transfer per hill plays a pivotal role in both quantity and quality seed production. Application of hormone also plays an important role to increase production in which, GA3 and Tricontanol are one of them but better to know the time and concentration of application of these growth regulators. While applying, higher and lower concentration vis-a-vis appropriate time affects both quality and

production of crop.

*Guide to Participatory Varietal Selection for Submergence-tolerant Rice* T. R. Paris.2011 The Green Revolution averted the threat of famine through the rapid adoption of improved rice varieties. However, despite this huge success, hundreds of millions of poor rice-farming families in rainfed areas still live in poverty and suffer from food (rice) insecurity. Despite many released improved rice varieties for rainfed conditions, farmers still use local varieties that can withstand drought and floods but have low yields or they use the same varieties for many years because of a lack of better varieties. Rainfed rice farmers are slow to adopt improved varieties because of several problems. One problem is more of extension than breeding - many farmers, particularly those living in remote rainfed areas, may not have access to or information about the seed of new varieties. Another problem is that variety testing programs are often conducted on-station, which does not represent farmers' fields. Moreover, conventional rice breeding programs usually seek farmers' input only at the very end of the process, when newly released varieties, usually one or two per year, are evaluated in on-farm demonstration trials. Often, in remote and unfavorable areas, subsistence farmers, who comprise the majority of the rural farming population in Asia, give importance to social and cultural dimensions aside from the agronomic performance of the new rice varieties. The complexities of developing acceptable varieties for variable and stressful rainfed environments require that breeders become deeply familiar with men and women farmers' needs and preferences. Since 1977, IRRI has been making efforts to improve communication among farmers, breeders, and extension workers so that men and women farmers' concerns and preferences are considered in plant breeding objectives. Participatory varietal selection (PVS) is a simple way for breeders and agronomists to learn which varieties perform well on-station and on-farm and to obtain feedback from the potential end users in the early phases of the breeding cycle. It is a means for social scientists to identify the varieties that most men and women farmers prefer, including the reasons for their preference and constraints to adoption. Based on IRRI's experience in collaboration with national agricultural research and extension system partners and farmers, PVS, which includes researcher-managed and farmer-managed trials, is an effective strategy for accelerating the dissemination of stress-tolerant varieties. PVS has also been instrumental in the fast release of stress-tolerant varieties through the formal varietal release system. This guide on PVS will complement the various training programs given by IRRI for plant breeders, agronomists, and extension workers engaged in rice varietal development and dissemination.

**Rice** S. D. Sharma.2010-05-27 During the last nine millennia or so, man has improved the rice plant, increased its productivity and has found various uses of its parts. Black Rice U.K.S Kushwaha.2016-02-19 The main purpose of this book is to introduce black rice to a wider circle of people. Although there have been research on different aspects of black rice, the information is scattered and not easily accessible to laypersons. The book intends to cover all the aspects of black rice from research, history, to its development. As such, the book will be suitable for both rice researchers and non-professionals who want to know more about this unique rice crop. Black rice, also known as forbidden rice, is packed with high level of nutrients and antioxidants. The antioxidants found in black rice is higher than the blueberries (that contain highest amount of anthocyanins). Black rice is black due to anthocyanin content in the outer layer of its kernel. Legend tells that this rice was consumed only by royals in China and it was expected that this rice would increase life span of the king. Consumption of black rice without approval was hanged. Ordinary individuals were not allowed to consume black rice. Thus this rice is also known as forbidden rice and Emperor's rice. Now this black heirloom rice is widely available in different parts of the world. Researchers have found that black rice reduce Reactive Oxygen Species (ROS), the free radicals produced in the body which is the cause of many diseases. This rice also reduce diabetes, inflammation, heart attack, allergy and obesity; reduce the growth of cancer, improves digestive system and is panacea of many health problems. Thus this rice is also known as long life rice. Food nutritionists consider black rice as modern super foods. The cultivation method of black rice is similar to general rice cultivation practices. There are many varieties available in black rice which is of different Asian origin but Chinese black rice is the most famous among them. Black rice has a wide range of applications because its bran is used as a natural food colouring dye, and it is also used to prepare noodles, pasta, porridge, wine etc. This rice takes slightly longer time to cook than widely available white rice. In modern era, black rice serve as one of the best food materials available to us to maintain our health with regular physical exercise.
