Measuring Success in Substance Use Grant Programs National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on the Review of Specific Programs in the Comprehensive Addiction and Recovery Act. 2021-01-15 The opioid epidemic, now several decades in the making, continues to cause pain and suffering for millions of Americans. Each year, thousands of individuals die from overdose, and thousands more grieve from these losses. Opioid use disorder (OUD) can lead to a complete interruption of day-to-day activities, including caring for one's family, maintaining a job or career, or keeping track of basic necessities, such as health care and finances. This report, the first in a series of three, examines four of the Substance Abuse and Mental Health Services Administration (SAMHSA)'s grant programs that help alleviate suffering due to opioids and improve treatment quality and access. It offers recommendations about the existing reporting tools used by these programs and proposes additional metrics and outcomes that should be considered.

Multivariate Applications in Substance Use Research Jennifer S. Rose, Laurie Chassin, Clark C. Presson, Steven J. Sherman. 2000-01-01 This edited volume introduces the latest advances in quantitative methods and illustrates ways to apply

these methods to important questions in substance use research. The goal is to provide a forum for dialogue between methodologists developing innovative multivariate statistical methods and substance use researchers who have produced rich data sets. Reflecting current research trends, the book examines the use of longitudinal techniques to measure processes of change over time. Researchers faced with the task of studying the causes, course, treatment, and prevention of substance use and abuse will find this volume helpful for applying these techniques to make optimal use of their data. This innovative volume: introduces the use of latent curve methods for describing individual trajectories of adolescent substance use over time; explores methods for analyzing longitudinal data for individuals nested within groups, such as families, classrooms, and treatment groups; demonstrates how different patterns of missing data influence the interpretation of results; reports on some recent advances in longitudinal growth modeling; illustrates methods to assess mediation when there are multiple mediating pathways underlying an intervention effect; describes methods to identify moderating relations in structural equation models; demonstrates the use of structural equation models to evaluate a preventive intervention; applies epidemic modeling techniques to understand the spread of substance use in society; illustrates the use of latent transition analysis to model substance use as a series of stages; and applies logistic regression to prospectively predict smoking cessation.

TASC: an Approach for Dealing with the Substance Abusing Offender National Association of State Drug Abuse Program Coordinators.1978 This manual is offered as a guide and resource for use by communities desiring to implement drug abuse control efforts which utilize and coordinate resources of both the criminal justice and health care systems in arriving at a comprehensive response to drug and drug-related crime. It describes Treatment Alternatives to Street Crime (TASC) as originally designed by the Special Action Office on Drug Abuse Prevention (SAODAP) and modified by the Law Enforcement Assistance Administration (LEAA). The major focus of the manual is upon development of a TASC project suitable for funding through an LEAA discretionary grant. A secondary purpose of the manual, however, is to assist communities in developing TASC-like programs for dealing with substance abusing offenders that could be supported by other funding resources if LEAA support is not sought or not available.

How to Write a Successful Research Grant Application Willo Pequegnat, Ellen Stover.2013-03-09 The Department of Health and Human Services has identified Acquired Immunodeficiency Syndrome (AIDS) as the foremost public health problem in the United States. The Centers for Disease Control (CDC) report that, as of December 31, 1994, there were 441,528 documented cases of AIDS in this country, and the number is increasing. AIDS is an illness characterized by a defect in natural immunity against disease. Many more individuals are known to be infected with Human Immunodeficiency Virus

(HIV) but do not have symptoms or the defining characteristics of AIDS. The incubation period for AIDS may range from 1 to 10 or more years in adults and 6 months to several years in children. Infected persons appear to be capable of transmitting infection indefinitely, even if they remain asymptomatic. In order to increase the number of minority investigators conducting research on HIV infection and AIDS, NIMH conducted a 3-day technical workshop for minority investigators on July 24-27, 1990, in Fairlakes, Virginia. University-based research programs were asked to nominate investigators who were selected on the basis of a referred 10-page prospectus for a proposed research project. This procedure was used because NIMH wanted to be sure that the prospective investigators were established in a research environment that would pr

Block Grants U S Government Accountability Office (G,U. S. Government Accountability Office (.2013-06 Pursuant to a congressional request, GAO evaluated the effects of new proposed funding allocation formulas for the Alcohol, Drug Abuse, and Mental Health (ADAMH) block grant, focusing on: (1) how well the formulas would equalize available service levels for at-risk populations across the nation; and (2) whether the formulas would provide similar funding levels for states with similar abilities to pay for their own programs. GAO found that: (1) the current ADAMH formula allocates over twice as much federal funding for states with high levels of program support, while the proposed formulas would increase federal funding in low-service states and narrow the disparity by 25 percent; (2) wealthier states currently receive 44-percent higher allotments than poorer states, while the proposed formulas would increase funding allocations for the poorest states by 35 percent and decrease allocation for the wealthiest states by 33 percent; (3) the proposed formulas would provide that states with equal abilities to pay would receive similar allocations; and (4) mental health allocations are already targeted to states with the lowest ability to pay, but the proposed formulas would equalize allocations among states with similar abilities to pay.
