Handbook of Remote Biometrics Massimo Tistarelli, Stan Z. Li, Rama Chellappa. 2009-06-02 The development of technologies for the identification of individuals has driven the interest and curiosity of many people. Spearheaded and inspired by the Bertillon coding system for the classification of humans based on physical measurements, scientists and engineers have been trying to invent new devices and classification systems to capture the human identity from its body measurements. One of the main limitations of the precursors of today's biometrics, which is still present in the vast majority of the existing biometric systems, has been the need to keep the device in close contact with the subject to capture the biometric measurements. This clearly limits the applicability and convenience of biometric systems. This book presents an important step in addressing this limitation by describing a number of methodologies to capture meaningful biometric information from a distance. Most materials covered in this book have been presented at the International Summer School on Biometrics which is held every year in Alghero, Italy and which has become a flagship activity of the IAPR Technical Committee on Biometrics (IAPR TC4). The last four chapters of the book are derived from some of the best presentations by the participating students of the school. The educational value of this book is also highlighted by the number of proposed exercises and questions which will help the reader to better understand the proposed topics.

Consumption and Violence Alexander Sedlmaier.2018-05-09 Combining the tools of political, social, cultural, and intellectual history, *Consumption and Violence: Radical Protest in Cold-War West Germany* explores strategies of legitimization developed by advocates of militant resistance to certain manifestations of consumer capitalism. The book contributes to a more sober evaluation of West German protest movements, not just terrorism, as it refrains from emotional and moral judgments, but takes the protesters' approaches seriously, which, regarding consumer society, had a rational core. Political violence is not presented as the result of individual shortcomings, but emerges in relation to major societal changes, i.e., the unprecedented growth of consumption. This new perspective sheds important light on violence and radical protest in post-war Germany, as previous books have failed to examine to what extent these forms of resistance should be regarded as reactions to changing regimes of provision. Continuing the recently growing interest in the interdependence of countercultures and consumer society, the focus on violence gives the argument a unique twist, making the book thought-provoking and engaging.

Say Nothing Brad Parks.2017-03-07 “Outstanding—starts with a bang and gets tenses and tenses. *Say Nothing* shows Parks is a quality writer at the top of his form.”—Lee Child “Terrific book. Truly terrific. Tension throughout and tears at the end.”—Sue Grafton Judge Scott Sampson doesn’t brag about having a perfect life, but the evidence is clear: A prestigious job. A loving marriage. A pair of healthy children. Then a phone call begins every parent’s most chilling nightmare. Scott’s six-year-old twins, Sam and Emma, have been taken. The judge must rule exactly as instructed in a drug case he is about to hear. If he refuses, the consequences for the children will be dire. For Scott and his wife, Alison, the kidnapper’s call is only the beginning of a twisting, gut-churning ordeal of blackmail, deceit, and terror. Through it all, they will stop at nothing to get their children back, no matter the cost to themselves...or to each other. “Complications and twists build to an unexpected climax that is both perfect and gut-wrenching.”—Library Journal (starred review) “Grips the reader from the get-go and doesn’t let up until the final twist.”—Associated Press

European Company Law Andrea Vicari. 2021-03-08 The book provides students of European company law courses, scholars and practitioners with an overview. Although company law remains mainly regulated at the level of national laws, it has become important to obtain a systematic view of the main directives in the field of company law, the EU Court of Justice's jurisprudence, the European Model Company Act and the state of implementation of these directives in the member states of the Union. The book therefore contains, in addition to the illustration of the law laid down by EU legislative bodies and the related soft laws, detailed references to the most important domestic legislations and case laws, in order to make them known and usable as much as possible. Moreover, the book allows identifying the most relevant current legislative trends and the main historical reasons for divergences.

Security Privatization Oldrich Bures, Helena Carrapico. 2018-05-18 This book widens the current debate on security privatization by examining how and why an increasing number of private actors beyond private military and security companies (PMSCs) have come to perform various security related functions. While PMSCs provide security for profit, most other private sector stakeholders make a profit by selling goods and services that were not originally connected with security in the traditional sense. However, due to the continuous introduction of new legal and technical regulations by public authorities, many non-security-related private businesses now have to perform at least some security functions. This volume offers new insights into security practices of non-security-related private businesses and their impact on security governance.

The contributions extend beyond the conceptual and theoretical arguments in the existing body of literature to offer a range of original case studies on the specific roles of non-security-related private companies of all sizes, from all areas of business and from different geographic regions.

MOOCs Now Susan W. Alman, Jennifer Jumba. 2017-02-14 Learn from experts who have created and presented Massive Open Online Courses (MOOCs) that can reach a vast audience, and discover how to develop and present this new online form of continuing education. MOOCs (Massive Open Online Courses) have become popular with eager learners as well as some educators wanting to test the boundaries of learning. Understandably, many educators approach MOOCs with trepidation and a number of questions. Are MOOCs simply a fad? Does this new venue threaten traditional higher education models? How are teachers to be remunerated for their efforts? And what can be done about student retention in an anonymous venue of a MOOC? This book answers these questions and many more, offering a practical and realistic guide to MOOCs—one that will help anyone involved in higher education to better understand MOOCs and enable them to make decisions about whether and how to offer MOOCs. The authors address topics such as the various costs of offering a MOOC (teachers, developers, licensing, and software), explain accessibility options, examine the challenges of copyright and the administration required, and explore what the librarian's role should be. This insightful guide also explains your options for the presentation of text, video, and audio content; whether to give assignments or tests; and how to decide whether you should offer your MOOC for free or require a fee and offer a certificate upon course completion.

Killing and Letting Die Bonnie Steinbock, Alastair Norcross. 1994 This collection contains twenty-one thought-provoking essays on the controversies surrounding the moral and legal distinctions between euthanasia and letting die. Since public awareness of this issue has increased this second edition includes nine entirely new essays which bring the treatment of the subject up-to-date. The urgency of this issue can be gauged in recent developments such as the legalization of physician-assisted suicide in the Netherlands, how-to manuals topping the bestseller charts in the United States, and the many headlines devoted to Dr. Jack Kevorkian, who has assisted dozens of patients to die. The essays address the range of questions involved in this issue pertaining especially to the fields of medical ethics, public policymaking, and social philosophy. The discussions consider the decisions facing medical and public policymakers, how those decisions will affect the elderly and terminally ill, and the medical and legal ramifications for patients in a permanently vegetative state, as well as issues of parent/infant rights. The book is divided into two sections. The first, Euthanasia and the Termination of Life-

Prolonging Treatment includes an examination of the 1976 Karen Quinlan Supreme Court decision and selections from the 1990 Supreme Court decision in the case of Nancy Cruzan. Featured are articles by law professor George Fletcher and philosophers Michael Tooley, James Rachels, and Bonnie Steinbock, with new articles by Rachels, and Thomas Sullivan. The second section, Philosophical Considerations, probes more deeply into the theoretical issues raised by the killing/letting die controversy, illustrating exceptionally well the dispute between two rival theories of ethics, consequentialism and deontology. It also includes a corpus of the standard thought on the debate by Jonathan Bennet, Daniel Dinello, Jeffrie Murphy, John Harris, Philipa Foot, Richard Trammell, and N. Ann Davis, and adds articles new to this edition by Bennett, Foot, Warren Quinn, Jeff McMahan, and Judith Lichtenberg.

The European Union as Protector and Promoter of Equality Thomas Giegerich. 2020-07-06 This book considers the European Union as a project with a major antidiscrimination goal, which is important to remember at a time of increasing resentment against particularly exposed groups, especially migrants, refugees, members of ethnic or religious minorities and LGBTI persons. While equality and non-discrimination have long been core principles of the international community as a whole, as is made obvious by the UN Charter and the Universal Declaration of Human Rights, they have shaped European integration in a particular way. The concepts of diversity, pluralism and equality have always been inherent in that process, the EU being virtually founded on the values of equality and non-discrimination. The Charter of Fundamental Rights of the EU contains the most modern and extensive catalogue of prohibited grounds of discrimination, supplementing the catalogue enshrined in the European Convention on Human Rights. EU law has given new impulses to antidiscrimination law both within Europe and beyond. The contributions to this book focus on how effective and credible the EU has been in combatting

discrimination inside and outside Europe. The authors present different (mostly legal) aspects of that topic and examine them from various intra- and extra-European angles.

Railway Infrastructure Security Roberto Setola,Antonio Sforza,Valeria Vittorini,Concetta Pragliola.2015-03-26 This comprehensive monograph addresses crucial issues in the protection of railway systems, with the objective of enhancing the understanding of railway infrastructure security. Based on analyses by academics, technology providers and railway operators, it explains how to assess terrorist and criminal threats, design countermeasures, and implement effective security strategies. In so doing, it draws upon a range of experiences from different countries in Europe and beyond. The book is the first to be devoted entirely to this subject. It will serve as a timely reminder of the attractiveness of the railway infrastructure system as a target for criminals and terrorists and, more importantly, as a valuable resource for stakeholders and professionals in the railway security field aiming to develop effective security based on a mix of methodological, technological and organizational tools. Besides researchers and decision makers in the field, the book will appeal to students interested in critical infrastructure protection.

Knowing What Students Know National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Board on Testing and Assessment,Committee on the Foundations of Assessment.2001-10-27 Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments-assessments that help students succeed in school by making as clear as possible the nature of their accomplishments and the progress of their learning. Knowing What Students Know essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment-what students know and how well they know it-as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented,

and examples are used to illustrate the principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, Knowing What Students Know will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.

The Political Economy of Private Security Helge Staff. The global growth of private security services signals a significant shift in the production of the most traditional good provided by modern nation states - security. This systematic mixed methods analysis, linking output- and process-oriented policy theories, shows patterns and mechanisms of how political factors - like party dominance - drive the development of private security policy and industry.
