Dançando Modelos em Anatomia Siane Paula de Araujo.2023-04-05 Esta obra convida a pensar sobre o

desenvolvimento de recursos metodológicos para o ensino e a aprendizagem de Anatomia Humana no âmbito da atuação docente em Dança. Para isso, apresenta-se uma pesquisa envolvendo os processos de delineamento, produção e avaliação de três modelos virtuais, também considerados objetos de aprendizagem, os quais foram destinados à disciplina Anatomia para o Movimento, do Curso de Licenciatura em Dança, da Escola de Belas Artes da UFMG, a saber: o jogo digital Monte o Esqueleto (MOE) e os players de vídeos Tipos de Articulações Sinoviais (TAS) e Coordenação Motora (COM). Seus processos de delineamento e produção obtiveram como principais teorizações as analogias e metáforas de Lakoff e Johnson, bem como conceitos de Anatomia, sob a perspectiva da Educação Somática. A avaliação desses materiais se configurou, em uma primeira instância, na identificação das metáforas nos modelos de forma a verificar se os conceitos pretendidos foram devidamente representados. A segunda instância avaliativa se refere à análise dos dados coletados em sala de aula a partir do conceito de *embodiment*, a fim de se compreender o processo de corporalização dos conteúdos dos modelos, enquanto objetos de aprendizagem. Nesse sentido, intenta-se ampliar concepções contemporâneas acerca das possibilidades de recursos e práticas didáticas na formação docente em Dança sobre o ensino de Anatomia, bem como para outros contextos relativos ao corpo e à tecnologia.

Anatomy & Physiology: An Integrative Approach Theresa Bidle, Michael McKinley, Valerie O'Loughlin. 2015-01-07
McKinley/O'Loughlin/Bidle: *Anatomy & Physiology: An Integrative Approach, 2e* brings multiple elements of the study of A&P together in ways that maximize understanding. Text discussions provide structural details in the context of their functional significance to integrate coverage of anatomy and physiology in each chapter. Chapters emphasize the interdependence of body systems by weaving prior coverage of one system into textual explanations of how other systems work. These system relationships are also covered in "Integrate: Concept Connection" boxes. All figures are carefully designed to support the text narrative, and carry brief textual explanations to make figures self-contained study tools. Special "Concept Overview" figures in each chapter tie together multi-faceted concepts in 1- or 2-page visual summaries. Applications are presented in "Integrate: Clinical View" boxes to apply chapter content using clinical examples that show students what can go wrong in the body, to help crystallize understanding of the "norm." Critical Thinking questions in "What Do You Think?" engage students in application or analysis to encourage students to think more globally about the content; 'What Did You Learn' are mini self-tests at the end of each section that assess whether students have a sufficient grasp of the content before moving on. End-of-chapter "Challenge Yourself" assessments include 'Do You Know the Basics', "Can You Apply What You've Learned?", and "Can You Synthesize What You've Learned?" question sets. Career opportunities pursued by students studying A&P are highlighted at the beginning of each chapter. Everyday analogies and practical advice for remembering material are presented in "Integrate: Learning Strategy" boxes. Chapters end with a summary of media tools available to help learn each chapter's content. Users who purchase Connect Plus receive access to the full online ebook version of the textbook.

Communication with Extraterrestrial Intelligence (CETI) Carl Sagan.1973 The first international conference on the problem of extraterrestrial civilizations, and contact with them, was held in September 1971 in Soviet Armenia. The conference was a gathering of specialists working in a wide variety of fields—astronomy, physics, radiophysics, computer science and technology, chemistry, biology, linguistics, archaeology, anthropology, sociology, and history—and included many scientists whose reputations are worldwide. For example, Freeman Dyson, Philip Morrison, and Charles Townes were

among the American participants; their Russian counterparts were of comparable distinction. The conference was jointly organized by the U.S. National Academy of Sciences (with assistance from the U.S. National Science Foundation) and the U.S.S.R. Academy of Sciences. Scientists from several other countries also participated. Many aspects of the problem of extraterrestrial civilizations were discussed in detail, and these discussions are fully presented in this book. Particular attention is devoted to the following questions: the plurality of planetary systems in the universe, the origin of life on Earth, the possibility of life arising on cosmic bodies, the origin and evolution of intelligence, the origin and development of technological civilizations, problems in searching for intelligent signals or for evidence of astroengineering activities, and the problems and possible consequences of establishing contact with extraterrestrial civilizations.
