Fundamentals of Mathematical Statistics S.C. Gupta, V.K. Kapoor. 2020-09-10 Knowledge updating is a never-ending process and so should be the revision of an effective textbook. The book originally written fifty years ago has, during the intervening period, been revised and reprinted several times. The authors have, however, been thinking, for the last few years that the book needed not only a thorough revision but rather a substantial rewriting. They now take great pleasure in presenting to the readers the twelfth, thoroughly revised and enlarged, Golden Jubilee edition of the book. The subject-matter in the entire book has been re-written in the light of numerous criticisms and suggestions received from the users of the earlier editions in India and abroad. The basis of this revision has been the emergence of new literature on the subject, the constructive feedback from students and teaching fraternity, as well as those changes that have been made in the syllabi and/or the pattern of examination papers of numerous universities. 1962 P J S Sandhu, Vinay Shankar, G G Dwivedi. 2015-08-06 The 1962 War was indeed a traumatic experience for the Indian arms. The story from the Indian side is generally well known but very little is known about how the Chinese planned and orchestrated the entire campaign. While India held a firm belief till the very end that China would not resort to a large scale military action; the Chinese on the other hand had been preparing for it since 1959. Even though the writing was on the wall, Indian Army allowed itself to be hustled into a war on those high Himalayas for which it was ill prepared.....a kind of hurtling towards a point of no return. Based on the Chinese literature, for the first time, this book has been able to delve into the Chinese thought process, their grand strategy and reconstruct various battles across the entire front from Chinese point

of view; of course tempered with what is known from authentic Indian sources. It is a narrative that is designed to fill a great void that has existed all these years about the 1962 Indo-China War.

Principles and Standards for Measuring Primary Production Timothy J. Fahey, Alan K. Knapp.2007-05-14 Principles and Standards for Measuring Net Primary Production in Long-Term Ecological Studies is the first book to establish a standardized method for measuring net primary productivity (NPP) in ecological research. Primary productivity is the rate at which energy is stored in the organic matter of plants per unit area of the earth's surface. As the beginning stage of the carbon cycle, our ability to accurately measure NPP is essential to any ecological analysis, as well as agronomy, forestry, fisheries, limnology and oceanography. In fact, NPP measurements are fundamental to ecosystem studies at thousands of sites around the world. All 26 LTER sites will be expected to collect and report data using these new standards, but the standards should reach well beyond LTER sites. Identified standards for NPP measurements will allow researchers from diverse biomes to authoritatively compare measurements among their sites. Comparable measurements will build a foundation for a broad scale understanding of the environmental, biological, and nutrition controls on NPP. The book includes chapters for each of the critical biome types, including special techniques that work best in each environment. For

example, there are chapters that discuss grassland ecosystems, urban ecosystems, marine pelagic ecosystems, forest ecosystems, and salt marsh ecosystems, among others.
