Down by the River Constance Elizabeth Hunt, Verne Huser. 1988 America's rivers are the heart of rich and vital riparian ecosystems, home to unique communities of plants and animals. Aesthetically pleasing as well as a crucial food source for wildlife, these habitats are slowly being destroyed in our eagerness to harness natural resources. Biological diversity -- the key to ecological stability -- is threatened by a range of developmental projects, including efforts to dam and channel waterflow, to convert flood-prone land to agriculture, to harvest timber, and to undertake oil and gas exploration. Down by the River explores these problems and their impact on an ecosystem that is often ignored or neglected.

A static map is no longer enough; there is now demand for a dynamic representation. Time is of great importance when operating on real world geographical phenomena, especially when these are dynamic. Researchers in the field of Temporal Geographical Information Systems (TGIS) have been developing methods of incorporating time into geographical information systems. Spatio-temporal analysis embodies spatial modelling, spatio-temporal modelling and spatial reasoning and data mining. *Advances in Spatio-Temporal Analysis* contributes to the field of spatio-temporal analysis, presenting innovative ideas and examples that reflect current progress and achievements.

Underflows Cleo Wölfle Hazard. 2022-03-14 Rivers host vibrant multispecies communities in their waters and along their banks, and, according to queer-trans-feminist river scientist Cleo Wölfle Hazard, their future vitality requires centering the values of justice, sovereignty, and dynamism. At the intersection of river sciences, queer and trans theory, and environmental justice, *Underflows* explores river cultures and politics at five sites of water conflict and restoration in California, Oregon, and Washington. Incorporating work with salmon, beaver, and floodplain recovery projects, Wölfle Hazard weaves narratives about innovative field research practices with an affectively oriented queer and trans focus on love and grief for rivers and fish. Drawing on the idea of underflows—the parts of a river’s flow that can’t be seen, the underground currents that seep through soil or rise from aquifers through cracks in bedrock—Wölfle Hazard elucidates the underflows in river cultures, sciences, and politics where Native nations and marginalized communities fight to protect rivers. The result is a deeply moving account of why rivers matter for queer and trans life, offering critical insights that point to innovative ways of doing science that disrupt settler colonialism and new visions for justice in river governance.

Caves David Shaw Gillieson.2021-06-09 People have been interested in caves for a very long time. Our distant ancestors used them for shelter, as sources of water, and as places in which to conduct essential rituals. They adorned their walls with

quite sophisticated artwork depicting both their existential and spiritual concerns. Caves feature in our mythology, they are used as places of worship in many cultures, and they are used throughout the world as places in which to store prized foodstuffs and wine. For at least two hundred years they have attracted scientists, artists, photographers, and recreational cavers. This book aims examines how caves form, the light they shed on past environments and climates, and the values, both environmental and cultural, that they provide to humanity. This second edition of *Caves: Processes, Development, and Management* is a welcome revision of the author's earlier treatment released over twenty years ago. It has been updated, significantly expanded, and largely rewritten. The intervening years have seen a dramatic increase in karst and cave research globally, with significant advances in our understanding of fundamental processes, in our ability to extract proxy climatic and environmental data from cave deposits, and in our understanding of the breadth of cave values and as a result the complexity of their management needs. This new edition adopts a broad international perspective in the research examples used and the cited literature, and has actively sought out material from the tropical world and the southern continents, thus avoiding the European and North American bias frequently found in speleological publications. *Caves: Processes, Development, and Management, Second Edition*, is organised into four sections. In the first section, contemporary processes of cave formation are examined. The second section of the book deals with past processes and their physical manifestation. In the third section, the use of caves by various organisms from bacteria to humans is explored. The final section of the book reviews our changing approaches to cave management and to catchment management on karst terrains. The book will be of use to anyone who is interested in caves and karst, or who wants to understand about cave formation, development, values and management.

The Bird in the Waterfall Jerry Dennis.2014-09-23 There is nothing in the universe like water. It is unique and beautiful and without it there could be no life on earth. Little wonder, then, that people have always expressed such awe, delight, and

reverence for it. The Bird in the Waterfall is a celebration of the wonders of water and the creatures that live in it. While exploring waterfalls and artesian springs, ocean waves and tidal bores, whirligig beetles and torrent ducks, author Jerry Dennis and artist Glenn Wolff address age-old aquatic mysteries: Why do rivers meander? What are the sources of hot springs and geysers? What causes tsunamis and rogue waves? Why is water blue—and sometimes green, black, yellow, or red? Why do we gather to watch falling water and crashing surf? Why do we toss coins into fountains? At the heart of The Bird in the Waterfall is a profound appreciation for the magic, music, and poetry of water—and a passionate appeal for the protection of this most precious of the earth’s resources. PRAISE: “A passionate appreciation for the magic, music, and poetry of water, and an appeal for the protection of this most precious of the earth’s resources.” —Natural Resources and Wildlife Magazine “Jerry Dennis is one of today’s most readable and informative nature essayists, and his latest book, The Bird in the Waterfall, is a marvelous look at the natural history of oceans, rivers, and lakes. It ought to be required reading for anyone who loves the outdoors, angling, surfing, beachcombing, or birding.” —Buffalo News “The Bird in the Waterfall is truly science for everyone. When you have finished reading it, you will not only know more, but you may become as charmed with water as Dennis is.” —Earth Magazine “I can’t think of anyone I know—angler, conservationist, scientific reader, curious kid—who wouldn’t enjoy, and learn from, this unusual book. And from endpaper to endpaper, it’s a visual delight, too.” —Fly Rod and Reel Magazine “Nature writer Dennis conveys his deep feelings for all aspects of the aquatic realm...and parlays his fascination with the dynamics of bodies of water into a richly informative description of how lakes and rivers support myriad lifeforms.” —Booklist
