**Early Warning Systems and Targeted Interventions for Student Success in Online Courses** Glick, Danny, Cohen, Anat, Chang, Chi, 2020-06-26 Online learning has increasingly been viewed as a possible way to remove barriers associated with traditional face-to-face teaching, such as overcrowded classrooms and shortage of certified teachers. While online learning has been recognized as a possible approach to deliver more desirable learning outcomes, close to half of online students drop out as a result of student-related, course-related, and out-of-school-related factors (e.g., poor self-regulation; ineffective teacher-student, student-student, and platform-student interactions; low household income). Many educators have expressed concern over students who unexpectedly begin to struggle and appear to fall off track without apparent reason. A well-implemented early warning system, therefore, can help educators identify students at risk of dropping out and assign and monitor interventions to keep them on track for graduation. Despite the popularity of early warning systems, research on their design and implementation is sparse. *Early Warning Systems and Targeted Interventions for Student Success in Online Courses* is a cutting-edge research publication that examines current theoretical frameworks, research projects, and empirical studies related to the design, implementation, and evaluation of early warning systems and targeted interventions and discusses their implications for policy and practice. Moreover, this book will review common challenges of early warning systems and dashboard design and will explore design principles and data visualization tools to make data more understandable and, therefore, more actionable. Highlighting a range of topics such as curriculum design, game-based learning, and learning support, it is ideal for academicians, policymakers, administrators, researchers, education professionals, instructional designers, data analysts, and students.

*Educating Tomorrow's Engineers* Great Britain: Parliament: House of Commons: Science and Technology Committee, 2013-02-08 In the UK we teach young people to become computer users and consumers rather than programmers and software engineers. This is creating a chronic skills gap in ICT. We need around 82,000 engineers and technicians just to deal with retirements up to 2016 and 830,000 SET professionals by 2020. On the plus side, the Government's proposal to include computer science as a fourth science option to count towards the EBac is welcomed. The Committee also welcomes the EBac's focus on attainment of mathematics and science GCSEs but is concerned that subjects such as Design and Technology (D&T) might be marginalised. A Technical Baccalaureate (TechBac) is being designed but if it is to be a success, schools should be incentivised to focus on the TechBac by making it equivalent to the EBac. Reforms to vocational education following the Wolf Review meant that Level 2 of the Engineering Diploma, a qualification highly regarded, would count as equivalent to one GCSE despite requiring curriculum time and effort equivalent to several GCSEs. The Engineering Diploma, however, is currently being redesigned as four separate qualifications. The Committee also expressed concerns over the Department for Education's (DfE) lack of clarity on its research budget, and use of evidence in decision-making. The DfE needs to place greater focus on gathering evidence before changes to qualifications are made, and must leave sufficient time for evidence to be gathered on the effectiveness of policies before introducing further change. The possibility of gathering evidence from randomised controlled trials (RCTs) should be seriously considered

*Innovation, Entrepreneurship and Sustainability* Norbert Grünwald,2015-06-03 The ICEBE conference in Windhoek is the sixth in a series of annual conferences on engineering and business education. It is organized by the Robert-Schmidt-Institute (University Wismar), hosted by Polytechnic of Namibia and co-organised by University of Applied Sciences Jena. The conferences were held in Sibiu (Romania), Manila (Philippines), Cape Town (South Africa) and Wismar (Germany). The theme of the Windhoek Conference is "Innovation, Entrepreneurship and Sustainability which describes the emphasis that is laid on always using these three terms in combination, i.e., not to consider one in isolation from the others. Thus the primary target of this conference is to provide the delegates with cross-disciplinary thinking related to the three main streams in engineering and business education.
