Clinical Research in Gastroenterology 1 S. Matern.2012-12-06 The last decade has seen tremendous developments in many fields of gastroenterology and hepatology. The aim of this series is to highlight some of these topics that deserve particular interest. Research in the field of viral hepatitis has been very intense and successful in recent years. The hepatitis B virus is one of the best explored at the current level of virology. Not only the nucleotid sequence of the viral DNA can be decoded, but also the amino acid compounds of its genetic products are known today. Since the techniques of molecular biology have increasingly found access to clinical laboratory use, hepatitis B virus infection can serve as an example for the importance of molecular biology in clinical hepa tology. Another example for the interdependence of basic science and clinical medicine represents the research on bile acid metabolism. The investigation of bile acids has revealed new diagnostic approaches to hepatic and intestinal disorders. Commercial kits for the routine measurement of serum bile acids in clinical laboratories by enzymatic or radioimmunologic techniques are now available. The diagnostic value of these measurements in gastroenterology and hepatology shall be defined. Another aspect of bile acid research leads to new perspectives in the treatment of gallstone disease. The dissolution of cholesterol gallstones by chenodeoxycholic acid (therapy) may be quoted as the best example for the development of new phar macotherapeutic principles derived from basic bile acid research.

Mediating Order and Chaos Rodney Farnsworth.2001 This literature-centered study offers an interdisciplinary approach to Romantic culture. It is pioneering in that it employs the complexity method of anthropology. Recent literary studies employ the complexity/chaos theory adapted from the natural sciences; however, here is presented for the first time a complexity method taken from the social/human sciences. This complexity method is useful in mediating not only contradictions within Romanticism, but the chaos of contemporary theories concerning it. One of the intensifying literary debates is that between the so-called Greens and Reds, naturalists and humanists. Mediating Order and Chaos not only traces the split between nature and man to Romantic Culture but finds there, too, a Spinozian vision of man and nature in unity - thereby denying any naturalist/humanist split. This volume is of interest for those who wish to see essays in the holistic approach to culture. Centering on hydraulics, hydrology, and meteorology, this study examines literature, painting, music, economics, and the rhetoric of science, philosophy, and politics, it therewith demonstrates how the water cycle was transformed into a cosmic metaphor that mediated, in the form of several complex adaptive systems, between the chaos of

too much change and that of not enough.
