*Everest* Reinhold Messner, 2000

Everest Reinhold Messner, 2014-11-15 'Everest by fair means - that is the human dimension, and that is what interests me ... In reaching for the oxygen cylinder, a climber degrades Everest ... a climber who doesn't rely on his own strength and skills, but on apparatus and drugs, deceives himself. In May 1978 Reinhold Messner and Peter Habeler became the first climbers in history to reach the summit of Mount Everest without the use of supplementary oxygen - an event which made international headlines and permanently altered the future of mountaineering. Here Messner tells how he and Habeler accomplished the impossible - and how it felt. He describes the dangers of the Khumbu Icefield, the daunting Lhotse flank, two lonely storm-filled nights at 26,247 feet, and finally the last step to the summit. *Everest: Expedition to the Ultimate* is a riveting account of the exhaustion, the exhilaration and the despair of climbing into the death zone. The book also includes a history of the mountain, successful ascents and Messner's reflections on recent tragedies on Mount Everest. Reinhold Messner was the first to climb all fourteen peaks higher than 8,000 metres. The author of more than a dozen books on his adventures, he lives in a castle in northern Italy.

The Britannica Guide to Explorers and Explorations That Changed the Modern World Kenneth Pletcher Senior Editor, Geography and History, 2009-12-20 Chronicles the history of human exploration, from the Silk Road travels and early exploration of the Atlantic Coastline to the age of discovery, the colonial exploration eras, and modern expeditions to the North and South Poles.

**Explorers in the 20th and 21st Centuries** Britannica Educational Publishing, 2013-06-01 Technological advances—including pressurized cabins for hot air balloons, rocketry that powers spacecraft, and deep-sea diving gear—have changed the face of exploration. What hasn't changed since ancient times, however, is the bravery and inquisitiveness of intrepid individuals at the forefront of modern-day exploration and adventure. Those who have challenged conventional thinking, and sought to test physical limits of human endurance in the 20th and 21st centuries are the subjects of this exciting collection of biographies.

**Last Climb** David Breashears,Audrey Salkeld,1999 This lavishly illustrated account of the ill-fated 1924 attempt by George Mallory and Andrew Irvine to be the first to the summit of Mt. Everest includes never-before-published archival photos plus details of all three of Mallory's historic 1920s Everest expeditions. 100+ photos.

**A Companion to Animal Physiology** C. Richard Taylor,Kjell Johansen,Liana Bolis,1982-04-30 Originally published in 1982, this book was designed to supplement Knut Schmidt-Nielsen's *Animal Physiology*. Using Schmidt-Nielsen's comparative approach to the study of animal form function, the text pursues in greater detail topics introduced in *Animal Physiology*. Like the textbook, the Companion is organised according to major environmental features: oxygen, food and energy, temperature, and water, concluding with a section on movement and structure. The papers brought together in this volume were presented in July 1980 to honour Smith-Nielsen's sixty-fifth birthday, at the Fifth International Conference on Comparative Physiology, held in Sandbjerg, Denmark.

*Adaptation to Altitude-Hypoxia in Vertebrates* P. Bouverot,2012-12-06 Adaptation to altitude hypoxia is characterized by a variety of functional changes which collectively facilitate oxygen transport from the ambient medium to the cells of the body. All of these changes can be seen at one time or another in the course of hypoxic exposure. Yet, as already stressed (Hannon and Vogel, 1977), an examination of the literature gives only a sketchy and often conflicting picture of the exact nature of these changes and how they interact as a function of exposure duration. This is partly because of the limited number of variables explored in a given study, but it is also attributable to differences in experimental design, differences among species in susceptibility to hypoxia, nonstandardized experimental conditions, lack of proper control of physical (e. g. , temperature) and physiological variables (e. g. , body mass), failure to take measurements at key periods of exposure, and gaps in knowledge about some fundamental mechanisms. Furthermore the available data on animals native to high altitude are meager and/or inconclusive. Extensive further work under well-controlled experimental conditions is required before a detailed picture can be made. Nevertheless, it has been a guiding principle in the preparation of this monograph rather to summarize the vastly dispersed material that constitutes the comparative physiology of adaptation to high altitude into a coherent picture, than to provide a comprehensive survey of the field.

**Sivalaya** Louis Charles Baume,1979 Probably the most awesome peaks in the world--certainly the highest--are those of the Himalaya; even the name, from the Sanskrit words for 'abode of the snows,' speaks of their remoteness. Crowning the Himalaya (and the linked Karakoram range) are fourteen peaks above 8000 metres in height: the Sivalaya, or 'abode of the gods.' In this book, Louis Baume presents the only comprehensive chronology of journeys, expeditions and ascents involving these highest peaks, and an extensive bibliography of books relating to them.--Book cover.
