Essentials of Sensation and Perception George Mather.2014-01-21 The study of sensation and perception looks at

how we acquire, process, and interpret information about the outside world. By describing key ideas from first principles, this straightforward introduction provides easy access to the basic concepts in the subject, and incorporates the most recent advances with useful historical background. The text takes a uniquely integrative approach, highlighting fundamental findings that apply across all the senses - including vision, hearing, touch, pain, balance, smell and taste - rather than considering each sense in isolation. Several pedagogical features help students to engage with the material. 'Key Term' and 'Key Concept' boxes describe technical terms and concepts whilst 'Question' boxes relate the material to everyday questions about perception. Each chapter ends with suggestions for further reading, and the final chapter draws together the material from the previous chapters, summarizing the broad principles described, and outlining some major unresolved issues. Assuming no prior knowledge, this book is an accessible and up-to-date overview of the processes of human sensation and perception. Presented in full color, it is an ideal introduction for pre-undergraduate and first year undergraduate students on courses in psychology, as well as neuroscience and biology.

Sensation and Perception Ashleigh Maxcey.2018-07-05 Sensation and Perception: From Cells to Awareness is an anthology comprised of classic and contemporary peer-reviewed journal articles related to sensation and perception, with special emphasis on vision, as it is well-researched and the most dominant of the five senses. The collection provides students with valuable instruction on how to read journal articles, comprehension questions to guide them through each article, and application questions to challenge their knowledge. With the goal of helping students understand how science is conducted and reported, Sensation and Perception contains full-length articles rather than excerpts, so students can effectively study them in full and learn from the content and structure of each article. Students read research pertaining to mapping cortical receptive fields, statistical learning, color vision, action and perception, the auditory system, and more. Novel in approach and immensely valuable to students who need experience reading, analyzing, and applying research for various programs or professions, this anthology is well suited for courses in sensation and perception, visual systems, and cognitive research methods.

The detailed narrative considers the impact of religion, sexuality, popular culture, technology, and politics on social graces, and it features more than 150 entries on topics considered taboo in American cultural history. Sensation, Perception and Action Johannes Zanker.2010-03-02 With a style that is both detailed and accessible, this new text from Johannes Zanker provides students with a solid understanding of how our sensory and perceptual systems operate, and interact with a dynamic world. It not only explains the scientific mechanisms involved, but discusses the costs and benefits of these mechanisms within an evolutionary, functional framework, to encourage important questions such as: What is a given sensory mechanism needed for? What kind of problem can it solve and what are its limitations? How does the environment determine how senses operate? How does action affect and facilitate perception? This unique, interdisciplinary framework allows students to see perceiving and acting as embedded in particular environments and directs them to think about the functional nature of these systems. The overall effect is an especially readable, authoritative text on Sensation, Perception and Action that really brings this fascinating topic to life.

Perception R. Held, H.W. Leibowitz, H.L. Teubner. 2012-12-06 This volume was designed to focus on the problems of perception and originally was to have been solely edited by Professor Hans-Lukas Teuber who was a member of the editorial board which initiated production of the Handbook. Accordingly, he issued invitations to a number of researchers in perception asking them to contribute chapters written in a style described in his words: . . . I hope that no author will feel constrained to undertake a major search of the literature: he could invite, instead, on an area in which he has been quite active himself and where most of the issues are immediately obvious to him. In this way, the writing of the chapter should be enjoyable rather than a chore . . . it should result in a personal account of the state of a given area rather than in an encyclopedic treatise . . . the field deserves this sort of summary review, particularly if it is pointed toward the future and speeds the convergence of developments in sensory physiology and psychological studies of perception. With the growing burden of national and international commitments including departmental headship, Professor Teuber felt that it would be wise to share the editorial responsibilities for this volume and accordingly, asked Professors Richard Held and Herschel Leibowitz to co-edit the volume with him in the same spirit as outlined in his invitation to authors. They agreed to help in this task.
