**Good Practice In Science Teaching: What Research Has To Say** Osborne, Jonathan, Dillon, Justin, 2010-05-01 This volume provides a summary of the findings that educational research has to offer on good practice in school science teaching. It offers an overview of scholarship and research in the field, and introduces the ideas and evidence that guide it.

## **The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education**

National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-06-21 In the United States, broad study in an array of different disciplines—arts, humanities, science, mathematics, engineering—as well as an in-depth study within a special area of interest, have been defining characteristics of a higher education. But over time, in-depth study in a major discipline has come to dominate the curricula at many institutions. This evolution of the curriculum has been driven, in part, by increasing specialization in the academic disciplines. There is little doubt that disciplinary specialization has helped produce many of the achievements of the past century. Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise, grappling with ever more specialized and fundamental problems. Yet today, many leaders, scholars, parents, and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos. These silos represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time. The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science, technology, engineering, mathematics, and medicine (STEMM) lead to improved educational and career outcomes for undergraduate and graduate students. It explores evidence regarding the value of integrating more STEMM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEMM education programs.

*Data Practices* Evelyn Ruppert,Stephan Scheel,2021-11-02 How EU data practices establish and assign people to categories, and how this matters in enacting--making up--Europe as a population and people. What is Europe and who are Europeans? *Data Practices* approaches this contemporary political and theoretical question by treating it as a practical problem of counting. Only through the myriad data practices that make up methods such as censuses can EU member states know their national populations, and this in turn is utilized by the EU to understand the population of Europe. But this volume approaches data practices not simply as reflecting populations but as performative in two senses: they simultaneously enact--that is, make up--a European population and, by so doing--intentionally or otherwise--also contribute to making up a European people. The book develops a conception of data practices to analyze and interpret findings from collaborative ethnographic multisite fieldwork conducted by an interdisciplinary team of social science researchers as part of a five-year project, *Peopling Europe: How Data Make a People*. The book focuses on data practices that involve establishing and assigning people to categories and how this matters in enacting Europe as a population and people. Five core chapters explore key categories of people--usual residents, refugees, homeless people, migrants, and ethnic minorities--and how they come into being through specific data practices such as defining, estimating, recalibrating and inferring. Two additional chapters address two key subject positions that data practices produce and require: the data subject and the statistician subject.

**Higher Education, Pedagogy and Social Justice** Kelly Freebody,Susan Goodwin,Helen Proctor,2019-11-07 This book explores how the concepts of social justice, diversity, equity and inclusion can be understood within the context of higher education. While terms such as these are often in common use in universities, they are not always used with clarity and precision. The editors and contributors offer a serious and detailed examination of pressing contemporary concerns around 'social justice' across politics, practice and pedagogy in order to encourage hard thinking and practical agenda setting for social-justice oriented research, teaching and community engagement. Drawing upon new theoretical work, research projects and innovative university teaching, this book offers both useful theoretical insights and practical possibilities for action. This collective and collaborative volume will be of interest and value to all those interested in promoting social justice, in particular how it can be promoted within the university setting.

**Beyond the HIPAA Privacy Rule** Institute of Medicine,Board on Health Care Services,Board on Health Sciences Policy,Committee on Health Research and the Privacy of Health Information: The HIPAA Privacy Rule,2009-03-24 In the realm of health care, privacy protections are needed to preserve patients' dignity and prevent possible harms. Ten years ago, to address these concerns as well as set guidelines for ethical health research, Congress called for a set of federal standards now known as the HIPAA Privacy Rule. In its 2009 report, *Beyond the HIPAA Privacy Rule: Enhancing Privacy, Improving Health Through Research*, the Institute of Medicine's Committee on Health Research and the Privacy of Health Information

concludes that the HIPAA Privacy Rule does not protect privacy as well as it should, and that it impedes important health research.

**Researching Internet Governance** Laura Denardis, Derrick Cogburn, Nanette S. Levinson, Francesca Musiani, 2020-09-08 Scholars from a range of disciplines discuss research methods, theories, and conceptual approaches in the study of internet governance. The design and governance of the internet has become one of the most pressing geopolitical issues of our era. The stability of the economy, democracy, and the public sphere are wholly dependent on the stability and security of the internet. Revelations about election hacking, facial recognition technology, and government surveillance have gotten the public's attention and made clear the need for scholarly research that examines internet governance both empirically and conceptually. In this volume, scholars from a range of disciplines consider research methods, theories, and conceptual approaches in the study of internet governance.

Hacking Tim Jordan, 2013-05-03 Hacking provides an introduction to the community of hackers and an analysis of the meaning of hacking in twenty-first century societies. On the one hand, hackers infect the computers of the world, entering where they are not invited, taking over not just individual workstations but whole networks. On the other, hackers write the software that fuels the Internet, from the most popular web programmes to software fundamental to the Internet's existence. Beginning from an analysis of these two main types of hackers, categorised as crackers and Free Software/Open Source respectively, Tim Jordan gives the reader insight into the varied identities of hackers, including: • Hacktivism; hackers and populist politics • Cyberwar; hackers and the nation-state • Digital Proletariat; hacking for the man • Viruses; virtual life on the Internet • Digital Commons; hacking without software • Cypherpunks; encryption and digital security • Nerds and Geeks; hacking cultures or hacking without the hack • Cybercrime; blackest of black hat hacking Hackers end debates over the meaning of technological determinism while recognising that at any one moment we are all always determined by technology. Hackers work constantly within determinations of their actions created by technologies as they also alter software to enable entirely new possibilities for and limits to action in the virtual world. Through this fascinating introduction to the people who create and recreate the digital media of the Internet, students, scholars and general readers will gain new insight into the meaning of technology and society when digital media are hacked.

National Science Education Standards National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, National Committee on Science Education Standards and Assessment, 1996-01-07 Americans agree that our students urgently need better science education. But what should they be expected to know and be able to do? Can the same expectations be applied across our diverse society? These and other fundamental issues are addressed in National Science Education Standards—a landmark development effort that reflects the contributions of thousands of teachers, scientists, science educators, and other experts across the country. The National Science Education

Standards offer a coherent vision of what it means to be scientifically literate, describing what all students regardless of background or circumstance should understand and be able to do at different grade levels in various science categories. The standards address: The exemplary practice of science teaching that provides students with experiences that enable them to achieve scientific literacy. Criteria for assessing and analyzing students' attainments in science and the learning opportunities that school science programs afford. The nature and design of the school and district science program. The support and resources needed for students to learn science. These standards reflect the principles that learning science is an inquiry-based process, that science in schools should reflect the intellectual traditions of contemporary science, and that all Americans have a role in improving science education. This document will be invaluable to education policymakers, school system administrators, teacher educators, individual teachers, and concerned parents.

Gendered Practices Boel Berner,1997 Technology has the power to shape lives, identities and futures. Experiences of technology vary, however, between women and men. Gender profoundly influences how technology is created, used and changed. The essays in this book discuss gendered practices in a wide range of technologies and technical milieus. Various sociotechnical arenas where definitions of masculinity and femininity are constituted, enacted, or put on display are explored: work places, schools, museums, and homes. The authors examine feminist political practices to influence technical change, as well as recent efforts to reconceptualize the relationships between gender and technology.

**Selecting, Preparing And Developing The School District Superintendent** David S.G. Carter,Thomas E. Glass,Shirley M. Hord,2013-11-05 Growing discontent with the performance of educational institutions is common in the USA today and little is being done to address the real problem - that of the need to reform and restructure the entire educational system. A key issue in this reform is the training and development of leaders in educational administration; as experienced leaders retire, so new professionals are called to assume the mantle of the old hands and vital new opportunities exist for those willing to take up the challenge.; This vitally practical text is about the selection, preparation and professional development of aspiring school leaders over the course of their careers, concentrating on ways to increase their overall effectiveness - particularly in changing times. It looks at changes that have been made and considers what can be adapted from existing systems in order to make radical improvements for those in leadership positions.; It is intended for use by postgraduate students in education, teacher trainings, heads of education faculties and teachers in leadership positions, school board members and aspirant superintendents.

**Managing Creativity in Organizations** A. Styhre,M. Sundgren,2005-09-20 Managing Creativity in Organizations addresses the notion of organizational creativity and innovation in general, and explores in some detail how it is achieved. The first part of the book critically reviews the literature on creativity. The second half explores the management of organizational creativity in the pharmaceutical industry. Here issues such as technology, cognition and leadership are

introduced as central resources and practices in the management of organizational creativity and innovation. The research is based on management practices in four companies, all of whom have demonstrated a significant ability to exploit their organizational creativity.

**Urban Commons** Christian Borch, Martin Kornberger, 2015-04-10 This book rethinks the city by examining its various forms of collectivity - their atmospheres, modes of exclusion and self-organization, as well as how they are governed - on the basis of a critical discussion of the notion of urban commons. The idea of the commons has received surprisingly little attention in urban theory, although the city may well be conceived as a shared resource. *Urban Commons: Rethinking the City* offers an attempt to reconsider what a city might be by studying how the notion of the commons opens up new understandings of urban collectivities, addressing a range of questions about urban diversity, urban governance, urban belonging, urban sexuality, urban subcultures, and urban poverty; but also by discussing in more methodological terms how one might study the urban commons. In these respects, the rethinking of the city undertaken in this book has a critical dimension, as the notion of the commons delivers new insights about how collective urban life is formed and governed.

**Objectivity and Diversity** Sandra Harding, 2015-05-18 Worries about scientific objectivity just won't go away, but by now, it's safe to say, no one who reflects on the appropriate role of values and interests in scientific research thinks it is or could be free of them. It now seems obvious that social, political, and economic values and interests influence research on weapons, for example, or health and the environment. Yet the dominant late twentieth-century philosophies of science have tended to conceptualize the reliability and predictive power of the results of research as damaged by such values and interests, and they continue to do so in spite of powerful analyses of how sciences operate in practice and in spite of the rise around the globe in the last four decades of various forms of participatory action research and citizen science, both of which take their research agendas from the concerns of disadvantaged groups. Why are the epistemic/scientific norm of objectivity and the social/political norm of diversity still perceived as inevitably in conflict with each other? Why aren't they perceived as in conflict only sometimes, but many times as providing valuable resources for each other? How can we promote science that is both more epistemically adequate and socially just? Sandra Harding probes these questions with clarity and concrete cases, and in doing so puts severe pressure on conventional philosophies of science and points to intellectually sounder and politically more progressive ways to think about them. She proposes a new way to relink sciences and their philosophies to democratic social relations, even while these are themselves undergoing transformations. A must read for anyone interested in how to think about the politics of science globally.

**Social Theory after the Internet** Ralph Schroeder, 2018-01-04 The internet has fundamentally transformed society in the past 25 years, yet existing theories of mass or interpersonal communication do not work well in understanding a digital world. Nor has this understanding been helped by disciplinary specialization and a continual focus on the latest innovations.

Ralph Schroeder takes a longer-term view, synthesizing perspectives and findings from various social science disciplines in four countries: the United States, Sweden, India and China. His comparison highlights, among other observations, that smartphones are in many respects more important than PC-based internet uses. Social Theory after the Internet focuses on everyday uses and effects of the internet, including information seeking and big data, and explains how the internet has gone beyond traditional media in, for example, enabling Donald Trump and Narendra Modi to come to power. Schroeder puts forward a sophisticated theory of the role of the internet, and how both technological and social forces shape its significance. He provides a sweeping and penetrating study, theoretically ambitious and at the same time always empirically grounded. The book will be of great interest to students and scholars of digital media and society, the internet and politics, and the social implications of big data.

The Beautiful Warriors Cornelia Sollfrank, 2019-12-05 The Beautiful Warriors: Technofeminist Practice in the 21st Century brings together seven current technofeminist positions from the fields of art and activism. In very different ways, they expand the theories and practices of 1990's cyberfeminism and thus react to new forms of discrimination and exploitation. Gender politics are negotiated with reference to technology, and questions of technology are combined with questions of ecology and economy. The different positions around this new techno-eco-feminism understand their practice as an invitation to take up their social and aesthetic interventions, to join in, to continue, and never give up. Contributions from Christina Grammatikopoulou, Isabel de Sena, Femke Snelting, Cornelia Sollfrank, Spideralex, Sophie Toupin, hvale vale, Yvonne Volkart.

*Slow Violence and the Environmentalism of the Poor* Rob Nixon, 2011-06-01 The violence wrought by climate change, toxic drift, deforestation, oil spills, and the environmental aftermath of war takes place gradually and often invisibly. Using the innovative concept of slow violence to describe these threats, Rob Nixon focuses on the inattention we have paid to the attritional lethality of many environmental crises, in contrast with the sensational, spectacle-driven messaging that impels public activism today. Slow violence, because it is so readily ignored by a hard-charging capitalism, exacerbates the vulnerability of ecosystems and of people who are poor, disempowered, and often involuntarily displaced, while fueling social conflicts that arise from desperation as life-sustaining conditions erode. In a book of extraordinary scope, Nixon examines a cluster of writer-activists affiliated with the environmentalism of the poor in the global South. By approaching environmental justice literature from this transnational perspective, he exposes the limitations of the national and local frames that dominate environmental writing. And by skillfully illuminating the strategies these writer-activists deploy to give dramatic visibility to environmental emergencies, Nixon invites his readers to engage with some of the most pressing challenges of our time.

Women, Work and Computerization Ellen Balka, Richard Smith, 2013-11-11 ELLENBALKA Simon Fraser University

ebalka@Sfu. ca 1. INTRODUCTION In developing the call for papers for the 7th International Federation of Information Processors (IFIP) Women, Work and Computerization Conference, we sought to cast our net widely. We wanted to encourage presenters to think broadly about women, work and computerization. Towards this end, the programme committee developed a call for papers that, in its final form, requested paper submissions around four related themes. These are (1) Setting the Course: Taking Stock of Where We Are and Where We're Going; (2) Charting Undiscovered Terrain: Creating Models, Tools and Theories; (3) Navigating the Unknown: Sex, Time, Space and Place, and (4) Taking the Helm: Education and Pedagogy. Our overall conference theme, 'Charting a Course to the Future' was inspired in part by Vancouver's geography, which is both coastal and mountainous. As such, navigation plays an important part in the lives of many as we seek to enjoy our environs. In addition, as the first Women, Work and Computerization conference of the new millennium, we hoped to encourage the broad community of scholars that has made past Women, Work and Computerization conferences a success to actively engage in imagining--and working towards-- a better future for women in relation to computers. The contributions to this volume are both a reflection of the hard work undertaken by many to improve the situation of women in relation to computerization, and a testament to how much work is yet to be done.

**Assessment of Responsible Innovation** Emad Yaghmaei, Ibo van de Poel, 2022-05 Brings together many of the leading researchers and thinkers in the field of RRI to present the most comprehensive review of RRI assessment tools.

Poststructural Policy Analysis Carol Bacchi, Susan Goodwin, 2016-10-24 This book offers a novel, refreshing and politically engaged way to think about public policy. Instead of treating policy as simply the government's best efforts to address problems, it offers a way to question critically how policies produce "problems" as particular sorts of problems, with important political implications. Governing, it is argued, takes place through these problematizations. According to the authors, interrogating policies and policy proposals as problematizations involves asking questions about the assumptions they rely upon, how they have been made, what their effects are, as well as how they could be unmade. To enable this form of critical analysis, this book introduces an analytic strategy, the "What's the Problem Represented to be?" (WPR) approach. It features examples of applications of the approach with topics as diverse as obesity, economic policy, migration, drug and alcohol policy, and gender equality to illustrate the growing popularity of this way of thinking and to provide clear and useful examples of poststructural policy analysis in practice.
